PSYCH 213-DL Social Psychology (1 Unit)
The purpose of this course is to introduce students to important theory,
research, and methodologies in social psychology. Social psychologists
examine how people interpret the social world and investigate the
influence of the social environment on individuals’ thoughts and
behaviors. We will examine classic topics in social psychology: social
education, social influence, conformity, group processes, helping, and
prejudice. There will be a strong emphasis on methodology and the
ways in which study design affects the research questions we
can answer and the conclusions we might draw. Because social
psychologists sometimes investigate “everyday” behavior, students often
believe that they can rely on intuition or common sense to learn about
social psychology. Unfortunately, one core finding in social psychology
is that common sense can be misleading at best and seriously biased at
worst. This course will focus on how the scientific method helps to
provide empirical answers to questions about humans and their social
world.
