SOCIAL SCIENCES

Social sciences majors examine humankind—its basic nature and evolution around the world and over time, its social structures and issues, and its politics and political institutions. Through interdisciplinary study that employs a full range of the research methods and comparative perspectives in the social sciences, students gain essential skills in critical reasoning and analysis, creative problem solving, writing, and social awareness.

In the social sciences major, students will explore related disciplines—anthropology, political science, psychology, and sociology—to develop analytical, interpretive, communication, and research skills that can be applied to complex problems and issues.
