

BIOTECHNOLOGY

Degree Type: Certificate

The Biotechnology Certificate reflects an interdisciplinary and interdepartmental training that is broader than what is available through an individual department. This certificate program promotes interdisciplinary education in biotechnology, interactions among faculty and among students with interests in biotechnology, and it provides students with substantial exposure to industrial biotechnology research and careers in industrial biotechnology.

Benefits of the Certificate program include the opportunity to explore a wide array of cutting edge and industrial research opportunities chosen from the life sciences, complemented by a core interdisciplinary curriculum.

Students with a certificate will have a broader exposure to cutting edge biotechnology that better prepares them for entry into the biotechnology industry or to pursue academic and governmental biotechnology research.
