

# CIVIL AND ENVIRONMENTAL ENGINEERING

Degree Types: MS, PhD

Graduates in the Department of Civil and Environmental Engineering (<https://www.mccormick.northwestern.edu/civil-environmental/academics/graduate/>) develop proficiencies in the theories and practices that allow to sustain human societies, and frame their future given the environmental changes to come. They acquire specialized knowledge through core courses specific to various research area and elective courses within and outside of the department.

PhD candidates are mentored by a faculty member and collaborate with peers within research groups to develop and pursue their own research program to address current and future societal needs. MS candidates can pursue research with the thesis option.

Current research topics in the department are organized into four foci:

- Ecosystems (<https://www.mccormick.northwestern.edu/civil-environmental/research/areas/ecosystems.html>)
- Human Systems (<https://www.mccormick.northwestern.edu/civil-environmental/research/areas/human-systems.html>)
- Materials Systems (<https://www.mccormick.northwestern.edu/civil-environmental/research/areas/material-systems.html>)
- Urban Systems (<https://www.mccormick.northwestern.edu/civil-environmental/research/areas/urban-systems.html>)

These research domains are supported by the traditional sectors of research and education in Civil and Environmental Engineering:

- Environmental Engineering and Science
- Geotechnical Engineering
- Mechanics, Materials and Structures
- Transportation Systems Analysis and Planning

Additional resources:

- Department website (<https://www.mccormick.northwestern.edu/civil-environmental/>)
- Program Handbook(s)

## Degrees Offered

- Civil and Environmental Engineering BS/MS (<https://catalogs.northwestern.edu/tgs/civil-environmental-engineering/civil-environmental-engineering-bach-mast/>)
- Civil and Environmental Engineering MS (<https://catalogs.northwestern.edu/tgs/civil-environmental-engineering/civil-environmental-engineering-ms/>)
- Civil and Environmental Engineering PhD (<https://catalogs.northwestern.edu/tgs/civil-environmental-engineering/civil-environmental-engineering-phd/>)

### Civil and Environmental Engineering: MS

Learning objective(s)/Students should be able to...

- Demonstrate achievement through fundamental coursework in the core disciplines of civil and environmental engineering.

- Demonstrate command over basic knowledge in the field and effective communication skills.
- Contribute to the innovation of professional practices in the field of civil and environmental engineering.
- Establish a career plan.
- Cultivate an interest in lifelong learning in the field of civil and environmental engineering.
- Enact ethical professional methodologies and practices.

### Civil and Environmental Engineering: PHD

Learning objective(s)/Students should be able to...

- Demonstrate achievement through advanced coursework in the core disciplines of civil and environmental engineering.
- Make original research contributions to the core disciplines of civil and environmental engineering.
- Contribute to the innovation of professional practices in the field of civil and environmental engineering.
- Demonstrate command of advanced knowledge in the field and effective communication skills.
- Develop excellence in the teaching of civil and environmental engineering subjects.
- Cultivate an interest in lifelong learning in the field of civil and environmental engineering.
- Promote diversity, equity, and inclusion in every aspect of the research, dissemination/outreach, and professional practice pertaining to the field of civil and environmental engineering.

## Civil and Environmental Engineering Courses

### CIV\_ENV 302-0 Engineering Law (1 Unit)

The American legal system from an engineer's perspective. Socratic-method analysis of statutory and case law. Contract, patent, corporation, antitrust, property, and environmental law. Torts, product liability, and arbitration.

Prerequisite: junior engineering standing.

### CIV\_ENV 303-0 Environmental Law and Policy (1 Unit)

An introduction to important aspects of environmental law and policy. Covers a wide range of environmental topics, with a focus on major federal environmental statutes.

Prerequisite: junior or senior standing.

### CIV\_ENV 304-0 Civil and Environmental Engineering Systems Analysis (1 Unit)

Quantitative techniques to develop descriptive and prescriptive models that support efficient planning and management of civil and environmental engineering systems.

Prerequisite: MATH 220-2 or equivalent.

### CIV\_ENV 306-0 Uncertainty Analysis (1 Unit)

Probability, statistics, and decision theory. Discrete and continuous random variables, marginal and conditional distributions, moments, statistical model selection and significance tests, hypothesis testing, and elementary Bayesian decision theory. Application to problems in soil mechanics, water resources, transportation, and structures.

### CIV\_ENV 308-0 Environmental Justice (1 Unit)

This course will examine evidence that there is not equal environmental protection in this country and analyze why this inequality exists. Course participants will review evidence of environmental injustice, with

attention to perspectives of grassroots organizations, the U.S. EPA, and businesses. The course will explore why civil and human rights have become important aspects of environmental protection activities worldwide.

**CIV\_ENV 309-0 Climate and Energy - Law and Policy (1 Unit)**

This course is a survey of the major laws that regulate the acquisition of energy resources, the conversion of energy resources into usable energy, the energy transmission and transportation infrastructure and the climate change implications of these activities.

**CIV\_ENV 314-0 Organic Geochemistry (1 Unit)**

The sources and fates of organic matter in the natural environment; global cycling of organic carbon; applications to the study of modern and ancient environments. Taught with EARTH 314-0; may not receive credit for both courses.

Prerequisites: 1 course in earth and planetary sciences or environmental sciences; 1 course in chemistry.

**CIV\_ENV 317-0 Biogeochemistry (1 Unit)**

Cycling of biogenic elements (C, N, S, Fe, Mn) in surficial environments. Emphasis on microbial processes and isotopic signatures.

Prerequisites: 1 quarter of chemistry; 1 quarter of geoscience, environmental sciences, or biological sciences.

**CIV\_ENV 320-0 Structural Analysis--Dynamics (1 Unit)**

Single and multiple degree-of-freedom systems subjected to periodic, seismic, and general loadings. Time-history analysis of linear and nonlinear systems. Design methods for earthquakes.

Prerequisite: CIV\_ENV 221-0.

**CIV\_ENV 321-0 Concrete Properties (1 Unit)**

Concrete as a composite material; relationship between constitutive laws and microstructure; failure theories; fracture; fatigue; strain rate effects; destructive and nondestructive testing; creep and shrinkage; chemistry of cement hydration; admixtures; aggregates; proportioning; new materials.

**CIV\_ENV 323-0 Structural Steel Design (1 Unit)**

Rational basis of structural design. Design approach for structural-steel components of a building system.

Prerequisites: CIV\_ENV 216-0; CIV\_ENV 221-0 or equivalent.

**CIV\_ENV 325-0 Reinforced Concrete (1 Unit)**

Fundamentals of reinforced concrete theory and design. Analysis and design of beams, slabs, and columns. Concurrent familiarization with current building codes, specifications, and practices.

Prerequisite: CIV\_ENV 221-0.

**CIV\_ENV 327-0 Finite Element Methods in Mechanics (1 Unit)**

Development of finite elements from variational principles and application to static stress analysis. Introduction to techniques for transient and generalized field problems. Computer implementation of finite element techniques. Taught with MECH\_ENG 327-0; may not receive credit for both courses.

**CIV\_ENV 328-0 Computational Forensics and Failure Analysis (1 Unit)**

The course will cover the use of the scientific method for accident investigation, hypothesis development, and the use of the finite element method to analyze the root cause of a failure. Practical application problems for both civil and mechanical structures will be analyzed using commercial finite element codes (Abaqus, Hypermesh, LS-Dyna)

Prerequisite: CIV\_ENV 327-0 or MECH\_ENG 327-0.

**CIV\_ENV 330-0 Engineering Project Management (1 Unit)**

Techniques for coordinating decisions and actions of various parties in the design and construction of civil and environmental engineering projects. Delivery systems; preconstruction services; project planning; cost control and value engineering; bidding.

Prerequisite: instructor consent.

**CIV\_ENV 332-10 Building Construction Estimating (1 Unit)**

Estimation of cost at different stages of design; conceptual estimating and quantity takeoff of various elements, such as materials, labor, and equipment.

Prerequisites: CIV\_ENV 330-0; consent of instructor.

**CIV\_ENV 336-10 Project Scheduling (1 Unit)**

Project planning, scheduling, and control using CPM arrow and precedence networks; resource allocation and resource leveling; earned value analysis; linear scheduling; PERT, CPM in dispute resolution and litigation, computer scheduling.

Prerequisite: CIV\_ENV 330-0.

**CIV\_ENV 340-0 Hydraulics and Hydrology (1 Unit)**

Civil and environmental engineering applications of fluid mechanics. Turbulent flow in pipes and rivers, pipe and river networks, and open channels.

Prerequisite: MECH\_ENG 241-0.

**CIV\_ENV 346-0 Ecohydrology (1 Unit)**

Interactions between water and ecosystems in freshwater, terrestrial, and urban environments. Feedbacks between ecological and hydrological processes. Engineering of ecosystems such as constructed wetlands, green roofs, and other green infrastructure for resilient and sustainable water management.

Prerequisites: Students must have taken MECH\_ENG 241, CIV\_ENV 260, and CIV\_ENV 361-1 or graduate standing.

**CIV\_ENV 352-0 Foundation Engineering (1 Unit)**

Application of soil mechanics to analysis and design of foundations and embankments. Settlement of structures, bearing capacities of shallow and deep foundations, earth pressures on retaining structures, and slope stability.

Prerequisite: CIV\_ENV 250-0.

**CIV\_ENV 353-0 Energy Geostuctures & Geosystems (1 Unit)**

This course focuses on energy geostuctures and geosystems: novel earth-contact technologies that provide renewable energy supply and structural support to any built environment. The course comprises theoretical and practical sessions. The theoretical sessions expand on the analysis and design of such technologies from energy, geotechnical and structural perspectives. The practical sessions simulate an actual design project of energy geostuctures.

**CIV\_ENV 357-0 Terramechanics (1 Unit)**

Problems defined by the interaction between machines and terrain—or by organisms and terrain—are ubiquitous on Earth, and they are beginning to play important roles elsewhere as we explore, exploit, and perhaps eventually occupy the moon and other planets. While aspects of these problems are understood, much remains to be learned in the field of terramechanics.

**CIV\_ENV 361-1 Environmental Microbiology (1 Unit)**

Basic principles and practical applications of microbiology to environmental issues, such as microbial contamination, degradation of organic contaminants, production of alternative fuels, and global climate change.

**CIV\_ENV 361-2 Public & Environmental Health (1 Unit)**

Current problems in public and environmental health, such as the worldwide burden of major infectious diseases, emergence of new pathogens, and environmental reservoirs of infectious organisms.

Prerequisite: CIV\_ENV 361-1 or consent of instructor.

**CIV\_ENV 364-0 Sustainable Water Systems (1 Unit)**

An overview of the engineered water cycle focusing the fundamental principles as well as the design and assessment methods for physical, chemical and biological treatment unit processes for drinking water treatment, used water treatment and reuse, and emerging issues such as the energy-food-water nexus.

Prerequisites: CIV\_ENV 260-0, MECH\_ENG 241-0.

**CIV\_ENV 365-0 Environmental Laboratory (1 Unit)**

Chemical and microbiological aspects of environmental engineering and science are explored through an integrated laboratory course.

Prerequisite: CIV\_ENV 367-0.

**CIV\_ENV 367-0 Chemical Processes in Aquatic Systems (1 Unit)**

Chemical principles for understanding and predicting the chemical composition and evolution of natural waters using an equilibrium approach. Applications to environmental issues such as metal speciation and toxicity, ocean acidification, carbon storage.

Prerequisite: BMD\_ENG 250-0 or CHEM\_ENG 211-0.

**CIV\_ENV 368-0 Sustainability: The City (1 Unit)**

Exploration of the issues that motivate the design and engineering of sustainable resource use and development.

**CIV\_ENV 370-0 Emerging Organic Contaminants (1 Unit)**

Fundamental molecular processes that govern the fate and transformation of emerging organic contaminants in natural and engineered environmental systems.

Prerequisite: CHEM 210-1 or consent of instructor.

**CIV\_ENV 371-0 Introduction to Transportation Planning and Analysis (1 Unit)**

Analysis and design of solutions to transportation problems; introduction to selected operations research and statistical analysis techniques; use of case studies in urban transportation, intercity passenger transport, and freight movements.

Prerequisite: junior standing or consent of instructor.

**CIV\_ENV 376-0 Transportation System Operations (1 Unit)**

Traffic-flow theory; vehicle and human factors, capacity analysis, intersection performance and control; management and control of arterial streets and networks; neighborhood traffic restraint, urban transit operations. Operations concepts and theories applied to actual problems through laboratory practice.

Prerequisite: basic understanding of calculus and statistics; knowledge of MATLAB desirable but not required.

**CIV\_ENV 377-0 Choice Modelling in Engineering (1 Unit)**

"This course focuses on the theory and practice of survey design, data and analysis. In this course students will learn the theories and scientific debates around the design, administration and analysis of various types of behavioral data-collection methods."

**CIV\_ENV 385-1 Architectural Engineering and Design 1: Fundamentals (1 Unit)**

Architectural engineering and design studios: architectural history, case studies in design, construction and management of buildings, and drawing and model building. Fundamental studio: basic architectural and structural design of a simple building project.

Prerequisite: junior standing in engineering or consent of instructor.

**CIV\_ENV 385-2 Architectural Engineering & Design 2: Intermediate (1 Unit)**

Architectural engineering and design studios: architectural history, case studies in design, construction and management of buildings, and drawing and model building. Intermediate studio: architectural and structural design of a building project with multiple requirements.

Prerequisites: CIV\_ENV 385-1 and junior standing in engineering; or consent of instructor.

**CIV\_ENV 385-3 Architectural Engineering & Design 3: Advanced Studio (1 Unit)**

Architectural engineering and design studios: architectural history, case studies in design, construction and management of buildings, and drawing and model building. Advanced studio: architectural and structural design of a large, complex building project.

Prerequisites: CIV\_ENV 385-2 and junior standing in engineering; or consent of instructor.

**CIV\_ENV 388-2 Building Science II: Application for Sustainable Buildings (1 Unit)**

This course enriches and applies the concepts learned in CIV\_ENV 388-1. The course comprises both theoretical and practical sessions.

Theoretical sessions introduce the environmental factors affecting occupants' comfort inside buildings. Practical sessions focus on the design of a virtual project, with calculations related to energy consumption and visual and thermal parameters with the help of computer software.

**CIV\_ENV 395-0 Special Topics in Civil and Environmental Engrg (1 Unit)**

Topics suggested by students or faculty and approved by the department.

**CIV\_ENV 398-1 Community-based Design 1 (1 Unit)**

Yearlong participation in two-or three-person team projects involving research, analysis, and/or design in the solution of environmental problems affecting primarily lower-income communities. Grade assigned only on completion of both units.

Prerequisite: consent of instructor.

**CIV\_ENV 398-2 Community-based Design 2 (1 Unit)**

Yearlong participation in two-or three-person team projects involving research, analysis, and/or design in the solution of environmental problems affecting primarily lower-income communities. Grade assigned only on completion of both units.

Prerequisite: consent of instructor.

**CIV\_ENV 410-0 Theory of Plates and Shells (1 Unit)**

Derivation of governing equations for plates, cylindrical shells and spherical shells, analytical and numerical methods for the solutions of elastic and inelastic problems, and civil engineering applications.

**CIV\_ENV 413-0 Experimental Solid Mechanics (1 Unit)**

Experimental techniques in measuring stress and strain. Strain gauge, photoelastic, brittle coating, and Moire techniques studies and applied with selected laboratory experiments. CIV\_ENV 413-0 and MECH\_ENG 413-0 are co-listed.

**CIV\_ENV 414-1 Mechanics of Composite Materials 1 (1 Unit)**

Introduction to basic concepts: fabrication of composite materials, micromechanics, macro-mechanics of unidirectional lamina, failure theories, mechanics of multidirectional laminate, lamination theory, hydrothermal effects, inter-laminar stresses, stress concentrations, structural design and optimization, and nondestructive evaluation. CIV\_ENV 414-1 and MECH\_ENG 414-1 are co-listed.

**CIV\_ENV 414-2 Mechanics of Composite Materials II (1 Unit)**

Introduction to basic concepts: fabrication of composite materials, micromechanics, macro-mechanics of unidirectional lamina, failure theories, mechanics of multidirectional laminate, lamination theory, hydrothermal effects, inter-laminar stresses, stress concentrations, structural design and optimization, and nondestructive evaluation. CIV\_ENV 414-2 and MECH\_ENG 414-2 are co-listed.

**CIV\_ENV 415-0 Theory of Elasticity (1 Unit)**

Notions of stress and strain. Basic equations of the linear theory of elastic media. Stress function and displacement potentials. Applications to specific classes of problems such as plane strain, contact stresses, and axisymmetric problems. Stress concentration. Singular states of stress. Dislocations and residual stresses.

#### **CIV\_ENV 416-0 Computational Nanodynamics (1 Unit)**

The objective of this course is to learn how to use theoretical and computational modeling tools to simulate dynamic solid mechanics phenomena at small scales. Topics covered include elementary concepts in dynamics, statistical mechanics, molecular interactions, coarse-graining strategies, and application of the molecular dynamics methodology to elasticity, diffusion, self-assembly, vibrations, fragmentation and fracture problems of relevance to nanoscale, biological and biomolecular systems.

#### **CIV\_ENV 417-1 Mechanics of Continua 1 (1 Unit)**

Introduction to mechanics of continuous media. Cartesian tensors; kinematics of deformable media; stress; balance laws; constitutive relations for selected solids and fluids.

#### **CIV\_ENV 419-0 Elastic Wave Propagation in Periodic Solids (1 Unit)**

Introduction of elastodynamic wave equations in anisotropic solids, plane longitudinal, transverse, and surface waves, harmonic waves and pulses, energy considerations, reflection, transmission, and mode conversion, scattering and diffraction problems, reciprocity relations, piezoelectric materials, and band engineering using periodic solids and metamaterials. Prerequisites: CIV\_ENV 415-0, MECH\_ENG 363-0 or MECH\_ENG 390-0, or equivalent.

#### **CIV\_ENV 421-0 Prestressed Concrete Design (1 Unit)**

Principles of prestressed concrete. Prestressing systems, end anchorage, and loss of prestress. Analysis and design of sections for flexure, shear, bond, bearing, and deflection. Continuous beams, slab, tension, and compression members. Circular prestressing.

#### **CIV\_ENV 422-0 Inelastic Analysis of Structures (1 Unit)**

Inelastic analysis of frames, plates, and shells. Plastic behavior and limit analysis theorems. Static and kinematic methods for calculating collapse loads. Yield surfaces for plates and shells, plastic potential flow law, and load capacity. Viscoelastic behavior and rheologic models. Creep of concrete and its effects in structures.

#### **CIV\_ENV 423-0 Matrix Analysis of Structures (1 Unit)**

Use of matrix methods for analysis of articulated structural systems, geometric matrices, stability, analysis of geometrically nonlinear systems, introduction to the finite element method.

#### **CIV\_ENV 424-0 Stability of Structures (1 Unit)**

Buckling of perfect and imperfect columns, mathematical treatment of various types of stability problems and stability criteria, dynamic and static instability, and energy methods. Buckling of frames, trusses, and beams. Snap-through, elastic-plastic columns, creep buckling, and basic approach to buckling of two- and three-dimensional bodies.

#### **CIV\_ENV 425-0 Behavior of Reinforced Concrete (1 Unit)**

Nonlinear behavior of reinforced concrete structural members. assumptions underlying serviceability criteria, ductility for earthquake design, etc.

#### **CIV\_ENV 426-1 Advanced Finite Element Methods 1 (1 Unit)**

Methods for treating material and geometric nonlinearities by finite elements; transient analysis: explicit and implicit time integration, partitioned methods, and stability; hybrid and mixed elements; finite elements for plates and shells; convergence, efficiency, and computer implementation. Co-listed with MECH\_ENG 426-1.

#### **CIV\_ENV 426-2 Advanced Finite Element Methods 2 (1 Unit)**

This course will cover the fundamentals of non-standard finite element formulations such as Moving Least Squares (MLS), Element Free Galerkin (EFG), Reproducing Kernel Particle Method (RKPM), Material Point Method (MPM), Arbitrary Lagrangian Eulerian (ALE) Formulations, and the eXtended Finite Element Method (XFEM). The course will also provide an in-depth investigation of advanced application of finite element analysis and interfacing user-developed material models with commercial finite element codes (Abaqus/LS-DYNA). Theory and implementation of computational plasticity, nonlinear elasticity, pressure-sensitive plasticity, and damage-based plasticity will be discussed. Material classes to be discussed are those commonly found in manufacturing, geomechanical, and biological applications such as ductile metals, soil, and tissue. Co-listed with MECH\_ENG 426-2.

#### **CIV\_ENV 428-1 Structural Design I (1 Unit)**

First course in the structural design studio. Students will learn fundamental topics of structural mechanics, materials, and engineering, and then apply them to a realistic design project, coordinated by practicing structural engineers.

#### **CIV\_ENV 428-2 Structural Design II (1 Unit)**

Second course in the structural design studio. Students will learn fundamental topics of structural mechanics, materials, and engineering, and then apply them to a realistic design project, coordinated by practicing structural engineers.

#### **CIV\_ENV 428-3 Structural Design III (1 Unit)**

Third course in the structural design studio. Students will learn fundamental topics of structural mechanics, materials, and engineering, and then apply them to a realistic design project, coordinated by practicing structural engineers.

#### **CIV\_ENV 430-0 Quasibrittle Fracture and Scaling (1 Unit)**

Fracture mechanics fundamentals. Concrete, composites, ice, rocks, soils, ceramics. Cohesive crack model. Crack band model. Damage. Localization. Nonlocality. Size effect laws. Statistical aspects. Discrete micro-modeling. Fracture stability. Environmental effects, loading rate and fatigue.

#### **CIV\_ENV 440-0 Environmental Transport Processes (1 Unit)**

Processes controlling transport and fate of dissolved and suspended substances in natural and engineered environmental systems. Mass balances, hydrodynamic transport, phase and mass transfers; the fate of reactive species in complex environmental systems..

#### **CIV\_ENV 442-0 Environmental Biotechnology for Resource Recovery (1 Unit)**

Theory and practice of microbiological processes used for pollution control and resource recovery: kinetics of suspended-growth and fixed-film processes, activated sludge, biofilm processes, nitrogen and phosphorus removal, methanogenesis.

Prerequisites: CIV\_ENV 440-0, CIV\_ENV 361-1.

#### **CIV\_ENV 443-0 Microbial Ecology for Resource Recovery (1 Unit)**

This course provides students with an overview of microbial ecology—that is, the study of interactions between microorganisms and the environment—and how complex microbial communities are linked function and stability of both engineered and natural systems.

#### **CIV\_ENV 447-0 Molecular Microbiology (1 Unit)**

An in-depth look at current molecular methods used to study environmental microbiology. Fundamentals of molecular microbiology, creative and critical analysis of literature through proposal writing and reviewing. Topics focus on polymerase chain reaction and derivatives; DNA sequencing; proteomics & proteogenomics, and metabolomics.

#### **CIV\_ENV 448-0 Computational Chemodynamics (1 Unit)**

An in-depth understanding of the processes that govern the fate of chemicals in the environment by developing computational tools used to quantify the concentrations of contaminants and nutrients. Numerical methods focus on solving: multiphase equilibrium problems, box models, reaction networks and kinetics, the interplay between transport and reaction, partitioning, and trophic relationships.

**CIV\_ENV 449-0 Environmental Particles and Surface Chemistry (1 Unit)**

Environmental particles facilitate the cycling of important elements in the environment. This course presents fundamental concepts and applications of chemical kinetics, chemical equilibrium, and molecular spectroscopy to characterize their surface properties.

**CIV\_ENV 450-1 Soil Mechanics 1 (1 Unit)**

First Quarter: Shear strength of soils. Theory of consolidation. Problems of rate-independent and rate-dependent settlement. Second Quarter: Foundation engineering. Bearing capacity of shallow and deep foundations. Deformation of foundations. Effects of construction on performance. Case studies. Third Quarter: Earth and earth-supported structures. Earth pressures on walls. Design of retaining structures and supported excavations. Effects of construction on performance. Stability of slopes. Design of earth dams and embankments. Case studies.

**CIV\_ENV 450-2 Soil Mechanics 2 (1 Unit)**

First Quarter: Shear strength of soils. Theory of consolidation. Problems of rate-independent and rate-dependent settlement. Second Quarter: Foundation engineering. Bearing capacity of shallow and deep foundations. Deformation of foundations. Effects of construction on performance. Case studies. Third Quarter: Earth and earth-supported structures. Earth pressures on walls. Design of retaining structures and supported excavations. Effects of construction on performance. Stability of slopes. Design of earth dams and embankments. Case studies.

**CIV\_ENV 450-3 Soil Mechanics 3 (1 Unit)**

First Quarter: Shear strength of soils. Theory of consolidation. Problems of rate-independent and rate-dependent settlement. Second Quarter: Foundation engineering. Bearing capacity of shallow and deep foundations. Deformation of foundations. Effects of construction on performance. Case studies. Third Quarter: Earth and earth-supported structures. Earth pressures on walls. Design of retaining structures and supported excavations. Effects of construction on performance. Stability of slopes. Design of earth dams and embankments. Case studies.

**CIV\_ENV 452-0 Unsaturated Soil Mechanics (1 Unit)**

Principles of the hydraulics and mechanics of natural and engineered soils characterized by unsaturated conditions.

**CIV\_ENV 454-0 Constitutive Models for Soils (1 Unit)**

Numerical models of effective and total stress-strain response of soils; non-linear pseudo-elastic, elasto-plastic and bounding surface models; parameter identification and applications.

Prerequisites: CIV\_ENV 450-1 or permission of instructor.

**CIV\_ENV 455-0 Plasticity and Limit Analysis (1 Unit)**

Fundamental theory of and computational tools for plasticity, including the concepts of yielding and plastic flow in materials and, by extension, the concepts of limit (collapse) loads and collapse mechanisms in boundary value problems.

**CIV\_ENV 456-0 Computational Geotechnics (1 Unit)**

Fundamentals of the finite element method for geotechnical analysis. This course provides an essential skillset to those entering the practice of geotechnical engineering, and builds a foundation for future study and inquiry to those who are engaged primarily in research.

**CIV\_ENV 457-0 Environmental Geotechnics (1 Unit)**

Site characterization, geotechnical aspects of waste containment, and remediation. Geological setting and the heterogeneous nature of soils. Design, testing, and quality control for geosynthetics.

**CIV\_ENV 458-0 Soil Dynamics (1 Unit)**

Dynamics of soils and soil-foundation systems; nuclear weapon effects, earthquake response, vibrations of machine foundations, reactions due to impact equipment, industrial noise and blast effects, fatigue concepts, wave propagation and attenuation, blast-resistant construction, and linear and nonlinear systems.

**CIV\_ENV 468-0 Metals in the Environment (1 Unit)**

A course on concepts, fundamentals, and tools used for studying the fate of metals in the environment. The emphasis is placed on the processes that control and regulate the chemical speciation of metals in aquatic environments and inform about their interactions with biological species.

**CIV\_ENV 471-1 Transportation Systems Analysis 1 (1 Unit)**

Applications of optimization methods to analysis, design, and operation of transportation and logistics networks. Network equilibrium; flow prediction in congested multicommodity networks; vehicle routing and fleet management; dynamic and stochastic transportation network modeling.

Prerequisites: IEMS 310-0 or equivalent background.

**CIV\_ENV 471-2 Transportation Systems Analysis 2 (1 Unit)**

Applications of optimization methods to analysis, design, and operation of transportation and logistics networks. Network equilibrium; flow prediction in congested multicommodity networks; vehicle routing and fleet management; dynamic and stochastic transportation network modeling.

Prerequisites: IEMS 310-0 or equivalent background.

**CIV\_ENV 472-1 Transportation System Operations and Control 1: Urban Networks (1 Unit)**

Concepts and advanced methodologies for the design of control strategies for transportation systems operations, focusing on urban traffic networks.

**CIV\_ENV 472-2 Transportation System Operations and Control 2: Scheduled Modes and Real-Time (1 Unit)**

Concepts and advanced methodologies for the design of service networks, operating plans and control strategies for scheduled transportation modes and real-time services.

**CIV\_ENV 474-0 Data Analytics for Urban Systems (1 Unit)**

This course presents concepts as well as computing tools for analyzing large data sets that are collected to improve urban systems with a particular focus on transportation. It covers tools for data exploration, preprocessing, mining, and visualization; up-to-date machine learning algorithms – random forest, xgboost, deep learning algorithms and reinforcement learning.

**CIV\_ENV 479-0 Transp Systems Planning & Management (1 Unit)**

Functional and structural description of transportation systems; characteristics of major US transportation modes; transportation analysis, planning, problem-solving, and decision-making methods illustrated through urban, freight, and intercity case studies.

**CIV\_ENV 480-1 Travel Demand Analysis & Forecasting 1 (1 Unit)**

Introduction and application of statistical, econometric, and marketing research techniques to study and forecast travel behavior. First Quarter: Introduction to theory, analysis, and model development. Second Quarter: Advanced theory, disaggregate choice models, and prediction methods.

**CIV\_ENV 480-2 Advances in Travel Demand Analysis and Forecasting (1 Unit)**

This course addresses developments in the econometric and behavioral aspects of demand analysis and forecasting, supply-demand interaction in transport systems, and dynamics models.

**CIV\_ENV 482-0 Evaluation and Decision Making for Infrastructure Systems (1 Unit)**

Theories and methods of evaluation and choice from alternatives for transportation and other infrastructure projects and systems. Economic, quantitative, and judgmental methods for both a priori and before-and-after evaluation. Measurement, modeling, analysis, and presentation problems.

Prerequisites: CIV\_ENV 306-0.

**CIV\_ENV 483-0 Infrastructure Systems Analysis (1 Unit)**

Quantitative techniques for developing prescriptive models that can be used to support efficient planning and management of civil infrastructure systems.

**CIV\_ENV 484-0 Advanced Theories of Traffic Flow (1 Unit)**

This course is concerned with the behavior of vehicular and multimodal traffic as a complex system. It seeks to convey a conceptual understanding of traffic processes through the development of mathematical models of these processes.

**CIV\_ENV 495-0 Selected Topics in Civil Engineering (1 Unit)**

Special topics under faculty direction.

**CIV\_ENV 497-0 Special Topics in Civil Engineering (0.5 Unit)**

Topics selected from work of current interest in civil or environmental engineering.

**CIV\_ENV 499-0 Projects (1-3 Units)**

Special projects under faculty direction. Permission of instructor and department required.

**CIV\_ENV 504-0 Structural System Capstone Pre-design Seminar (0 Unit)**

Preliminary discussion and planning of a structural system with realistic constraints to be designed by students in the M.S. program with specialization in structural engineering and geotechnical engineering.

**CIV\_ENV 508-0 M.S. Research Paper for non-thesis option (0 Unit)**

Report on topics approved by faculty for M.S. students with non-thesis option.

**CIV\_ENV 512-1 Structural Engineering & Mechanics Sem (0 Unit)**

Selected topics in structural engineering and materials and mechanics of materials and solids.

**CIV\_ENV 512-2 Structural Engineering & Mechanics Sem (0 Unit)**

Selected topics in structural engineering and materials and mechanics of materials and solids.

**CIV\_ENV 512-3 Structural Engineering & Mechanics Sem (0 Unit)**

Selected topics in structural engineering and materials and mechanics of materials and solids.

**CIV\_ENV 515-1 Geotechnics Seminar (0 Unit)**

Discussion of classical and current literature in the field.

**CIV\_ENV 515-2 Geotechnics Seminar (0 Unit)**

Discussion of classical and current literature in the field.

**CIV\_ENV 516-1 Seminar in Environmental Engineering & Science (0 Unit)**

Topics vary. Examples: environmental microbiology; innovation technologies for recycling, recovery, treatment of chemical residuals; environmental policy; public health; water and waste treatment processes; contaminant fate and impact in nature.

**CIV\_ENV 516-2 Seminar in Environmental Engineering and Science (0 Unit)**

Topics vary. Examples: environmental microbiology; innovation technologies for recycling, recovery, treatment of chemical residuals; environmental policy; public health; water and waste treatment processes; contaminant fate and impact in nature.

**CIV\_ENV 516-3 Seminar in Environmental Engineering and Science (0 Unit)**

Topics vary. Examples: environmental microbiology; innovation technologies for recycling, recovery, treatment of chemical residuals; environmental policy; public health; water and waste treatment processes; contaminant fate and impact in nature.

**CIV\_ENV 517-1 Seminar in Transportation Engineering (0 Unit)**

Selected topics in transportation engineering.

**CIV\_ENV 517-2 Seminar in Transportation Engineering (0 Unit)**

Selected topics in transportation engineering.

**CIV\_ENV 517-3 Seminar in Transportation Engineering (0 Unit)**

Selected topics in transportation engineering.

**CIV\_ENV 590-0 Research (1-4 Units)**

Independent investigation of selected problems pertaining to thesis or dissertation. May be repeated for credit.
