CIVIL AND ENVIRONMENTAL ENGINEERING

https://www.mccormick.northwestern.edu/civil-environmental/

Degree Types: PhD, MS

The Department of Civil and Environmental Engineering (https://www.mccormick.northwestern.edu/civil-environmental/graduate) offers MS and PhD degrees in environmental engineering and science, geotechnics, transportation systems analysis and planning, MS in structural engineering and a PhD degree in mechanics, materials, and structures.

Both MS and PhD degree programs provide a strong background in the theory and practice of modern civil and environmental engineering through formal course and research requirements. Each student's program is designed to suit his or her interests and previous education.

The MS program emphasizes enhancement of professional skills, knowledge, and research techniques. The PhD is a research degree involving novel, creative, and extensive approaches to problem solving.

Degrees Offered

- Civil and Environmental Engineering MS (https://catalogs.northwestern.edu/tgs/civil-environmental-engineering/civil-environmental-engineering-ms)
- Civil and Environmental Engineering PhD (https://catalogs.northwestern.edu/tgs/civil-environmental-engineering/civil-environmental-engineering-phd)

Civil and Environmental Engineering Courses

CIV_ENV 302-0 Engineering Law (1 Unit)
Prerequisite: junior engineering standing.

CIV_ENV 303-0 Environmental Law and Policy (1 Unit)
An introduction to important aspects of environmental law and policy. Covers a wide range of environmental topics, with a focus on major federal environmental statutes.
Prerequisite: junior or senior standing.

CIV_ENV 304-0 Civil and Environmental Engineering Systems Analysis (1 Unit)
Quantitative techniques to develop descriptive and prescriptive models that support efficient planning and management of civil and environmental engineering systems.
Prerequisite: MATH 220-2 or equivalent.

CIV_ENV 306-0 Uncertainty Analysis (1 Unit)
Probability, statistics, and decision theory. Discrete and continuous random variables, marginal and conditional distributions, moments, statistical model selection and significance tests, hypothesis testing, and elementary Bayesian decision theory. Application to problems in soil mechanics, water resources, transportation, and structures.

CIV_ENV 314-0 Organic Geochemistry (1 Unit)
The sources and fates of organic matter in the natural environment; global cycling of organic carbon; applications to the study of modern and ancient environments. Taught with EARTH 314-0; may not receive credit for both courses.
Prerequisites: 1 course in earth and planetary sciences or environmental sciences; 1 course in chemistry.

CIV_ENV 317-0 Biogeochemistry (1 Unit)
Cycling of biogenic elements (C, N, S, Fe, Mn) in surficial environments. Emphasis on microbial processes and isotopic signatures.
Prerequisites: 1 quarter of chemistry; 1 quarter of geoscience, environmental sciences, or biological sciences.

CIV_ENV 318-0 Mechanics of Fracture (1 Unit)
Stress concentration, analysis of the stress field near a crack tip, fracture modes, brittle and ductile fracture, fracture toughness, fracture criteria, fracture mechanics design, fatigue, and dynamic effects.

CIV_ENV 319-0 Theory of Structures 2 (1 Unit)
Shear center, non-prismatic members, nonlinear materials, influence lines, Mueller-Breslau principle, approximate methods of analysis, energy methods, stiffness matrix, and computer methods of analysis.
Prerequisite: CIV_ENV 221-0.

CIV_ENV 320-0 Structural Analysis--Dynamics (1 Unit)
Prerequisite: CIV_ENV 221-0.

CIV_ENV 321-0 Concrete Properties (1 Unit)
Concrete as a composite material; relationship between constitutive laws and microstructure; failure theories; fracture; fatigue; strain rate effects; destructive and nondestructive testing; creep and shrinkage; chemistry of cement hydration; admixtures; aggregates; proportioning; new materials.

CIV_ENV 322-0 Structural Design (1 Unit)
Design criteria; planning and design aspects of structural systems for gravity and lateral loads. A total design project involving the analysis and design of a structure.
Prerequisite: CIV_ENV 325-0 or equivalent.

CIV_ENV 323-0 Structural Steel Design (1 Unit)
Rational basis of structural design. Design approach for structural-steel components of a building system.
Prerequisites: CIV_ENV 216-0; CIV_ENV 221-0 or equivalent.

CIV_ENV 325-0 Reinforced Concrete (1 Unit)
Prerequisite: CIV_ENV 221-0.

CIV_ENV 327-0 Finite Element Methods in Mechanics (1 Unit)
Development of finite elements from variational principles and application to static stress analysis. Introduction to techniques for transient and generalized field problems. Computer implementation of finite element techniques. Taught with MECH_ENG 327-0; may not receive credit for both courses.

CIV_ENV 330-0 Engineering Project Management (1 Unit)
Techniques for coordinating decisions and actions of various parties in the design and construction of civil and environmental engineering projects. Delivery systems; preconstruction services; project planning; cost control and value engineering; bidding.
Prerequisite: instructor consent.

CIV_ENV 332-0 Building Construction Estimating (1 Unit)
Estimation of cost at different stages of design; conceptual estimating and quantity takeoff of various elements, such as materials, labor, and equipment. Prerequisites: CIV_ENV 330-0; consent of instructor.

**CIV_ENV 336-0 Project Scheduling (1 Unit)**
Project planning, scheduling, and control using CPM arrow and precedence networks; resource allocation and resource leveling; earned value analysis; linear scheduling; PERT, CPM in dispute resolution and litigation, computer scheduling. Prerequisite: CIV_ENV 330-0.

**CIV_ENV 340-0 Hydraulics and Hydrology (1 Unit)**
Civil and environmental engineering applications of fluid mechanics. Turbulent flow in pipes and rivers, pipe and river networks, and open channels. Prerequisite: MECH_ENG 241-0.

**CIV_ENV 346-0 Ecohydrology (1 Unit)**
Interactions between water and ecosystems in freshwater, terrestrial, and urban environments. Feedbacks between ecological and hydrological processes. Engineering of ecosystems such as constructed wetlands, green roofs, and other green infrastructure for resilient and sustainable water management.

**CIV_ENV 349-0 Environmental Management (1 Unit)**
The roles and responsibilities of project managers who deal with environmental issues. How managers deal with previously created environmental problems, respond to current requirements, and anticipate future needs. Prerequisites: a technical background and senior standing.

**CIV_ENV 352-0 Foundation Engineering (1 Unit)**
Application of soil mechanics to analysis and design of foundations and embankments. Settlement of structures, bearing capacities of shallow and deep foundations, earth pressures on retaining structures, and slope stability. Prerequisite: CIV_ENV 250-0.

**CIV_ENV 355-0 Hydrogeology and Subsurface Contamination (1 Unit)**
The integration of principles of geology, physics, chemistry, and mathematics required for understanding groundwater flow and how to perform aquifer tests, the fate and remediation of contaminants in the subsurface, and to develop numerical models for simulating these processes. Prerequisite: fluid mechanics.

**CIV_ENV 356-0 Transport Processes in Porous Media (1 Unit)**
Transport processes in porous media including unsaturated flow, flow in deformable porous media, convective transport of solutes with hydrodynamic dispersion effects, and coupled flow phenomena with particular emphasis on electrokinetics.

**CIV_ENV 358-0 Airphoto Interpretation (1 Unit)**
Principles and practice of using aerial photographs to obtain information about natural features of the earth's surface, with emphasis on earth materials. Landforms, geological processes, rocks, and soils. Stereoscopic photographs, elements of photogrammetry. Prerequisite: junior standing or consent of instructor.

**CIV_ENV 361-0 Environmental Microbiology (1 Unit)**
Basic principles and practical applications of microbiology to environmental issues, such as microbial contamination, degradation of organic contaminants, production of alternative fuels, and global climate change.

**CIV_ENV 361-2 Public & Environmental Health (1 Unit)**
Current problems in public and environmental health, such as the worldwide burden of major infectious diseases, emergence of new pathogens, and environmental reservoirs of infectious organisms. Prerequisite: CIV_ENV 361-0 or consent of instructor.

**CIV_ENV 363-0 Environmental Engineering Applications 1: Air and Land Conservation (1 Unit)**
Nature and control of community air pollution. Sources, physical and chemical properties, and effects of major air pollutants; analytical measurements and monitoring of air pollutants; engineering and legislative control. Prerequisite: CIV_ENV 260-0.

**CIV_ENV 365-0 Environmental Laboratory (1 Unit)**
Chemical and microbiological aspects of environmental engineering and science are explored through an integrated laboratory course. Prerequisite: CIV_ENV 367-0.

**CIV_ENV 367-0 Chemical Processes in Aquatic Systems (1 Unit)**
Fundamental molecular processes that govern the fate and transformation of emerging organic contaminants in natural and engineered environmental systems. Prerequisite: CHEM 210-0 or consent of instructor.

**CIV_ENV 370-0 Emerging Organic Contaminants (1 Unit)**
Exploration of the issues that motivate the design and engineering of sustainable resource use and development.

**CIV_ENV 371-0 Introduction to Transportation Planning and Analysis (1 Unit)**
Analysis and design of solutions to transportation problems; introduction to selected operations research and statistical analysis techniques; use of case studies in urban transportation, intercity passenger transport, and freight movements. Prerequisite: junior standing or consent of instructor.

**CIV_ENV 376-0 Transportation System Operations (1 Unit)**
Traffic-flow theory; vehicle and human factors, capacity analysis, intersection performance and control; management and control of arterial streets and networks; neighborhood traffic restraint, urban transit operations. Operations concepts and theories applied to actual problems through laboratory practice. Prerequisite: basic understanding of calculus and statistics; knowledge of MATLAB desirable but not required.

**CIV_ENV 385-0 Architectural Engineering and Design 1: Fundamentals (1 Unit)**
Architectural engineering and design studios: architectural history, case studies in design, construction and management of buildings, and drawing and model building. Fundamental studio: basic architectural and structural design of a simple building project. Prerequisite: junior standing in engineering or consent of instructor.

**CIV_ENV 385-2 Architectural Engineering & Design 2: Intermediate (1 Unit)**
Architectural engineering and design studios: architectural history, case studies in design, construction and management of buildings, and drawing and model building. Intermediate studio: architectural and structural design of a building project with multiple requirements.
to specific classes of problems such as plane strain, contact stresses, elastic media. Stress function and displacement potentials. Applications

Introduction of elastodynamic wave equations in anisotropic solids, plane longitudinal, transverse, and surface waves, harmonic waves and pulses, energy considerations, reflection, transmission, and mode conversion, scattering and diffraction problems, reciprocity relations, piezoelectric materials, and band engineering using periodic solids and metamaterials. Prerequisites: CIV_ENV 415-0, MECH_ENG 363-0 or MECH_ENG 390-0, or equivalent.

Solution of nonlinear equations for structures, shear center and center of twist of open and multicell cross sections, shear stresses in multicell closed cross sections, restrained warping torsion stresses.

Use of matrix methods for analysis of articulated structural systems, geometric matrices, stability, analysis of geometrically nonlinear systems, introduction to the finite element method.

Buckling of perfect and imperfect columns, mathematical treatment of various types of stability problems and stability criteria, dynamic and static instability, and energy methods. Buckling of frames, trusses, and beams. Snap-through, elastic-plastic columns, creep buckling, and basic approach to buckling of two- and three-dimensional bodies.

Prerequisites: CIV_ENV 385-1 and junior standing in engineering; or consent of instructor.

Architectural engineering and design studios: architectural history, case studies in design, construction and management of buildings, and drawing and model building. Advanced studio: architectural and structural design of a large, complex building project.

Prerequisites: CIV_ENV 385-2 and junior standing in engineering; or consent of instructor.

The objective of this course is to learn how to use theoretical and computational modeling tools to simulate dynamic solid mechanics phenomena at small scales. Topics covered include elementary concepts in dynamics, statistical mechanics, molecular interactions, coarse-graining strategies, and application of the molecular dynamics methodology to elasticity, self-assembly, vibrations, fragmentation and fracture problems of relevance to nanoscale, biological and biomolecular systems.

Introduction to mechanics of continuous media. Cartesian tensors; kinematics of deformable media; stress; balance laws; constitutive relations for selected solids and fluids.

Kinematics of deformable media, thermodynamics and balance laws of continua, general theory of constitutive equations. Emphasis on large deformation theories; objective stress and deformation measures with applications in finite strain elasticity. Introduction to nonlinear and inelastic material behavior including applications in plasticity and viscoelasticity.

Prerequisites: CIV_ENV 417-1 or equivalent.

Introduction of elastodynamic wave equations in anisotropic solids, plane longitudinal, transverse, and surface waves, harmonic waves and pulses, energy considerations, reflection, transmission, and mode conversion, scattering and diffraction problems, reciprocity relations, piezoelectric materials, and band engineering using periodic solids and metamaterials. Prerequisites: CIV_ENV 415-0, MECH_ENG 363-0 or MECH_ENG 390-0, or equivalent.

Solution of nonlinear equations for structures, shear center and center of twist of open and multicell cross sections, shear stresses in multicell closed cross sections, restrained warping torsion stresses.

Use of matrix methods for analysis of articulated structural systems, geometric matrices, stability, analysis of geometrically nonlinear systems, introduction to the finite element method.

Buckling of perfect and imperfect columns, mathematical treatment of various types of stability problems and stability criteria, dynamic and static instability, and energy methods. Buckling of frames, trusses, and beams. Snap-through, elastic-plastic columns, creep buckling, and basic approach to buckling of two- and three-dimensional bodies.
Nonlinear behavior of reinforced concrete structural members. Assumptions underlying serviceability criteria, ductility for earthquake design, etc.

CIV_ENV 426-1 Advanced Finite Element Methods 1 (1 Unit)
Methods for treating material and geometric nonlinearities by finite elements; transient analysis: explicit and implicit time integration, partitioned methods, and stability; hybrid and mixed elements; finite elements for plates and shells; convergence, efficiency, and computer implementation. Co-listed with MECH_ENG 426-1.

CIV_ENV 426-2 Advanced Finite Element Methods 2 (1 Unit)
This course will cover the fundamentals of non-standard finite element formulations such as Moving Least Squares (MLS), Element Free Galerkin (EFG), Reproducing Kernel Particle Method (RKPM), Material Point Method (MPM), Arbitrary Lagrangian Eulerian (ALE) Formulations, and the eXtended Finite Element Method (XFEM). The course will also provide an in-depth investigation of advanced application of finite element analysis and interfacing user-developed material models with commercial finite element codes (Abaqus/LS-DYNA). Theory and implementation of computational plasticity, nonlinear elasticity, pressure-sensitive plasticity, and damage-based plasticity will be discussed. Material classes to be discussed are those commonly found in manufacturing, geomechanical, and biological applications such as ductile metals, soil, and tissue. Co-listed with MECH_ENG 426-2.

CIV_ENV 430-0 Quasistatic Fracture and Scaling (1 Unit)

CIV_ENV 434-0 Total Quality Management (1 Unit)
How to achieve quality through continuous improvement of processes, customer satisfaction, and creating a team environment; includes data collection and analysis for process improvement.

CIV_ENV 435-0 Cost Engineering and Control (1 Unit)
Application of cost engineering for construction companies and projects; accounting methods; estimating process and bid preparation; labor cost; earned value analysis; accounting for equipment; cost-control concepts; cash flow management, changes and extras; claims. Prerequisites: PROJ_MGT 403-0 and PROJ_MGT 405-0

CIV_ENV 436-0 Construction Contracts & Dispute Resolution (1 Unit)

CIV_ENV 440-0 Environmental Transport Processes (1 Unit)
Processes controlling transport and fate of dissolved and suspended substances in natural and engineered environmental systems. Mass balances, hydrodynamic transport, phase and mass transfers; the fate of reactive species in complex environmental systems.

CIV_ENV 441-0 Chemical Microbial Interactions (1 Unit)
Applications of classical microbiology and molecular biology methods to study complex microbial communities. Includes a laboratory component. Prerequisites: CIV_ENV 361-1.

CIV_ENV 442-0 Environmental Biotechnology for Resource Recovery (1 Unit)

CIV_ENV 443-0 Microbial Ecology for Resource Recovery (1 Unit)
This course provides students with an overview of microbial ecology—that is, the study of interactions between microorganisms and the environment and how complex microbial communities are linked function and stability of both engineered and natural systems.

CIV_ENV 444-0 Physical/Chemical Processes in Environmental Control (1 Unit)
Theory and practice of separations and conversions in water quality and residuals management, coagulation, adsorption, ion exchange, oxidation, sedimentation, flocculation, filtration. Prerequisites: CIV_ENV 367-0, CIV_ENV 440-0 or equivalent.

CIV_ENV 445-0 Environmental Systems Laboratory (1 Unit)
Use of a variety of experimental methods to probe processes occurring in water treatment operations and complex natural systems. Emphasis on bringing multiple tools to bear in order to evaluate overall system behavior.

CIV_ENV 446-0 Environmental Analytical Chemistry (1 Unit)
Theory and the applications of analytical chemistry as applied to complex, multiphase environmental systems. Prerequisites: CIV_ENV 367-0.

CIV_ENV 447-0 Molecular Microbiology (1 Unit)
An in-depth look at current molecular methods used to study environmental microbiology. Fundamentals of molecular microbiology, creative and critical analysis of literature through proposal writing and reviewing. Topics focus on polymerase chain reaction and derivatives; DNA sequencing; proteomics & proteogenomics, and metabolomics.

CIV_ENV 448-0 Computational Chemodynamics (1 Unit)
An in-depth understanding of the processes that govern the fate of chemicals in the environment by developing computational tools used to quantify the concentrations of contaminants and nutrients. Numerical methods focus on solving: multiphase equilibrium problems, box models, reaction networks and kinetics, the interplay between transport and reaction, partitioning, and trophic relationships.

CIV_ENV 450-1 Soil Mechanics 1 (1 Unit)

CIV_ENV 450-2 Soil Mechanics 2 (1 Unit)

CIV_ENV 451-0 Engineering Properties of Soils (1 Unit)
Determination and interpretation of engineering properties of soils. Laboratory testing procedures and methods of evaluation and control. Report writing.

CIV_ENV 452-0 Unsaturated Soil Mechanics (1 Unit)
Principles of the hydraulics and mechanics of natural and engineered soils characterized by unsaturated conditions.

CIV_ENV 453-0 Rock Mechanics (1 Unit)
Engineering properties and behavior of rock masses. Shear strength of rock, in situ and laboratory tests of strength, rock fracture, three-dimensional geometry of joint systems, stability of rock masses, in situ stress determination, and deformability of rock masses.

CIV_ENV 454-0 Constitutive Models for Soils (1 Unit)
Numerical models of effective and total stress-strain response of soils; non-linear pseudo-elastic, elasto-plastic and bounding surface models; parameter identification and applications. Prerequisites: CIV_ENV 450-1 or permission of instructor.

CIV_ENV 455-0 Plasticity and Limit Analysis (1 Unit)
Fundamental theory of and computational tools for plasticity, including the concepts of yielding and plastic flow in materials and, by extension, the concepts of limit (collapse) loads and collapse mechanisms in boundary value problems.

CIV_ENV 456-0 Computational Geotechnics (1 Unit)
Fundamentals of the finite element method for geotechnical analysis. This course provides an essential skillset to those entering the practice of geotechnical engineering, and builds a foundation for future study and inquiry to those who are engaged primarily in research.

CIV_ENV 457-0 Environmental Geotechnics (1 Unit)

CIV_ENV 458-0 Soil Dynamics (1 Unit)
Dynamics of soils and soil-foundation systems; nuclear weapon effects, earthquake response, vibrations of machine foundations, reactions due to impact equipment, industrial noise and blast effects, fatigue concepts, wave propagation and attenuation, blast-resistant construction, and linear and nonlinear systems.

CIV_ENV 461-0 Soil Science for Environmental Engineering (1 Unit)
Fundamental properties and behavior of soil systems, with emphasis on soil physics, soil chemistry, and soil microbiological and biochemical reactions applied to contaminant transport and fate. Includes laboratory experience with soil.

CIV_ENV 467-0 Advanced Environmental Chemistry (1 Unit)
Principles and applications needed to develop advanced problem-solving techniques in environmental chemistry. Major topics include applied thermodynamics, environmental organic chemistry, and problem solving for acid/base, complexation, precipitation/dissolution, and redox.

CIV_ENV 468-0 Metals in the Environment (1 Unit)
A course on concepts, fundamentals, and tools used for studying the fate of metals in the environment. The emphasis is placed on the processes that control and regulate the chemical speciation of metals in aquatic environments and inform about their interactions with biological species.

CIV_ENV 471-1 Transportation Systems Analysis 1 (1 Unit)
Applications of optimization methods to analysis, design, and operation of transportation and logistics networks. Network equilibrium; flow prediction in congested multicommodity networks; vehicle routing and fleet management; dynamic and stochastic transportation network modeling. Prerequisites: IEMS 310-0 or equivalent background.

CIV_ENV 471-2 Transportation Systems Analysis 2 (1 Unit)
Applications of optimization methods to analysis, design, and operation of transportation and logistics networks. Network equilibrium; flow prediction in congested multicommodity networks; vehicle routing and fleet management; dynamic and stochastic transportation network modeling. Prerequisites: IEMS 310-0 or equivalent background.

CIV_ENV 472-1 Transportation System Operations and Control 1: Urban Networks (1 Unit)
Concepts and advanced methodologies for the design of control strategies for transportation systems operations, focusing on urban traffic networks.

CIV_ENV 472-2 Transportation System Operations and Control 2: Scheduled Modes and Real-Time (1 Unit)
Concepts and advanced methodologies for the design of service networks, operating plans and control strategies for scheduled transportation modes and real-time services.

CIV_ENV 473-0 Survey methods, data and analysis (1 Unit)
Theories and techniques of sampling for surveys; methods and modes of survey implementation; types of information collected through different questionnaires; and design of stated preference experiments for discrete choice modeling.

CIV_ENV 479-0 Transp Systems Planning & Management (1 Unit)
Functional and structural description of transportation systems; characteristics of major US transportation modes; transportation analysis, planning, problem-solving, and decision-making methods illustrated through urban, freight, and intercity case studies.

CIV_ENV 480-1 Travel Demand Analysis & Forecasting 1 (1 Unit)
Introduction and application of statistical, econometric, and marketing research techniques to study and forecast travel behavior. First Quarter: Introduction to theory, analysis, and model development. Second Quarter: Advanced theory, disaggregate choice models, and prediction methods.

CIV_ENV 480-2 Advances in Travel Demand Analysis and Forecasting (1 Unit)
This course addresses developments in the econometric and behavioral aspects of demand analysis and forecasting, supply-demand interaction in transport systems, and dynamics models.

CIV_ENV 482-0 Evaluation and Decision Making for Infrastructure Systems (1 Unit)
Theories and methods of evaluation and choice from alternatives for transportation and other infrastructure projects and systems. Economic, quantitative, and judgmental methods for both a priori and before-and-after evaluation. Measurement, modeling, analysis, and presentation problems. Prerequisites: CIV_ENV 306-0.

CIV_ENV 483-0 Infrastructure Systems Analysis (1 Unit)
Quantitative techniques for developing prescriptive models that can be used to support efficient planning and management of civil infrastructure systems.
**CIV_ENV 484-0 Advanced Theories of Traffic Flow (1 Unit)**
This course is concerned with the behavior of vehicular and multimodal traffic as a complex system. It seeks to convey a conceptual understanding of traffic processes through the development of mathematical models of these processes.

**CIV_ENV 495-0 Selected Topics in Civil Engineering (1 Unit)**
Special topics under faculty direction.

**CIV_ENV 497-0 Special Topics in Civil Engineering (0.5 Unit)**
Topics selected from work of current interest in civil or environmental engineering.

**CIV_ENV 499-0 Projects (1-3 Units)**
Special projects under faculty direction. Permission of instructor and department required.

**CIV_ENV 503-0 Materials & Methods in Construction (0 Unit)**

**CIV_ENV 504-0 Structural System Capstone Pre-design Seminar (0 Unit)**
Preliminary discussion and planning of a structural system with realistic constraints to be designed by students in the M.S. program with specialization in structural engineering and geotechnical engineering.

**CIV_ENV 508-0 M.S. Research Paper for non-thesis option (0 Unit)**
Report on topics approved by faculty for M.S. students with non-thesis option.

**CIV_ENV 512-1 Structural Engineering & Mechanics Sem (0 Unit)**
Selected topics in structural engineering and materials and mechanics of materials and solids.

**CIV_ENV 512-2 Structural Engineering & Mechanics Sem (0 Unit)**
Selected topics in structural engineering and materials and mechanics of materials and solids.

**CIV_ENV 512-3 Structural Engineering & Mechanics Sem (0 Unit)**
Selected topics in structural engineering and materials and mechanics of materials and solids.

**CIV_ENV 515-1 Geotechnics Seminar (0 Unit)**
Discussion of classical and current literature in the field.

**CIV_ENV 515-2 Geotechnics Seminar (0 Unit)**
Discussion of classical and current literature in the field.

**CIV_ENV 516-1 Seminar in Environmental Engineering & Science (0 Unit)**
Topics vary. Examples: environmental microbiology; innovation technologies for recycling, recovery, treatment of chemical residuals; environmental policy; public health; water and waste treatment processes; contaminant fate and impact in nature.

**CIV_ENV 516-2 Seminar in Environmental Engineering and Science (0 Unit)**
Topics vary. Examples: environmental microbiology; innovation technologies for recycling, recovery, treatment of chemical residuals; environmental policy; public health; water and waste treatment processes; contaminant fate and impact in nature.

**CIV_ENV 516-3 Seminar in Environmental Engineering and Science (0 Unit)**
Topics vary. Examples: environmental microbiology; innovation technologies for recycling, recovery, treatment of chemical residuals; environmental policy; public health; water and waste treatment processes; contaminant fate and impact in nature.

**CIV_ENV 517-1 Seminar in Transportation Engineering (0 Unit)**
Selected topics in transportation engineering.

**CIV_ENV 517-2 Seminar in Transportation Engineering (0 Unit)**

**CIV_ENV 517-3 Seminar in Transportation Engineering (0 Unit)**

**CIV_ENV 519-0 Responsible Conduct of Research Training (0 Unit)**

**CIV_ENV 533-1 Project Management Seminar (0 Unit)**
Selected topics in project management and engineering.

**CIV_ENV 533-2 Project Management Seminar (0 Unit)**
Selected topics in project management and engineering.

**CIV_ENV 533-3 Project Management Seminar (0 Unit)**
Selected topics in project management and engineering.

**CIV_ENV 590-0 Research (1-4 Units)**
Independent investigation of selected problems pertaining to thesis or dissertation. May be repeated for credit.
