Clinical Psychology

https://www.psychiatry.northwestern.edu/

Degree Types: MA, PhD

The PhD Program in Clinical Psychology (https://www.psychiatry.northwestern.edu/education/clinical-psychology-phd) is one of only a handful of programs in the United States based in an academic medical center and housed in a psychiatry department. This unique setting provides opportunities for translational research and practice that span molecular to social models of disease, and epidemiologic to clinical and neuroimaging methodologies. This scientist-practitioner program effectively balances clinical and research training to produce graduates who are competent in the science and practice of clinical psychology. Training is provided through core and emphasis-specific curricula, intensive research mentoring, and exceptional clinical practica. Major milestones include a research qualifying paper, a clinical qualifying exam, an empirical dissertation with original research, and an APA-accredited clinical internship.

Our mentor-based program prepares students to be competitive for careers as clinical psychologists in academic health centers and related medical facilities. The Clinical Psychology Master of Arts (MA) Program (https://www.psychiatry.northwestern.edu/education/clinical-psychology-ma) within the Department of Psychiatry and Behavioral Sciences at Northwestern University Feinberg School of Medicine is intended for students interested in pursuing a career in academic clinical psychology. The MA program is designed to provide a foundation in academic clinical psychology at the graduate level, while also allowing students to gain educational and research exposure to major areas of study within clinical psychology, including Adult Psychopathology and Treatment, Health Psychology/Behavioral Medicine, Clinical Child and Adolescent Psychology, and Clinical Neuropsychology and Behavioral Neuroscience.

The goals of the MA Program in Clinical Psychology are to:

1. Develop foundational competencies in research design, analytics, and ethics within academic clinical psychology.
2. Explore major areas of study within academic clinical psychology.
3. Understand educational and career opportunities within academic clinical psychology.

Note: the MA Program in Clinical Psychology does not include clinical training and is not intended to prepare students for clinical practice. Given the academic and research focus of the MA Program, the degree will not lead to licensure for independent practice. For those interested in master’s level programs that prepare students for licensure and practice, please visit the MA in Counseling website (https://www.family-institute.org/graduate-education/master-arts-counseling), the MS in Marriage and Family Therapy website (https://www.family-institute.org/graduate-education/master-science-marriage-family-therapy) and The Family Institute website (https://www.family-institute.org).

The MA Program in Clinical Psychology was designed for a variety of students, including students who:

1. Are not yet ready to apply to a PhD program, but are considering doing so in the future.
2. Wish to improve their competitiveness for a PhD program.
3. Are interested in exploring a career in academic clinical psychology.
4. With interests in related fields for which a background in academic clinical psychology may be of value.

The MA Program is embedded in the Clinical Psychology PhD Program, with coursework and lab work completed alongside PhD students. Although students in the MA Program are welcome to apply to the PhD Program in Clinical Psychology, the MA Program is not intended to be a “gateway” into the PhD Program in Clinical Psychology at Northwestern University Feinberg School of Medicine.

Degrees Offered

- Clinical Psychology MA (https://catalogs.northwestern.edu/tgs/clinical-psychology/clinical-psychology-ma)
- Clinical Psychology PhD (https://catalogs.northwestern.edu/tgs/clinical-psychology/clinical-psychology-phd)

Clinical Psychology Courses

CLIN_PSY 402-0 Psychological Assessment I (1 Unit)
This course provide an introduction to psychological assessment, focusing on developing knowledge and proficiency in the assessment of intellectual and related cognitive abilities in adults, children, and special populations, as well as proficiency in psychological report writing. Prerequisite: CLIN_PSY 402-0 or equivalent.

CLIN_PSY 403-0 Psychological Assessment II (1 Unit)
This course focuses on development of skills in the use, administration, scoring and interpretation of results from standardized measures assessing cognitive (i.e., memory) and academic functioning, conducting clinical interviews and observations of behavior as part of conducting psychological assessments, and developing advanced skills in integrated report writing. Prerequisite: CLIN_PSY 402-0 or equivalent.

CLIN_PSY 404-0 Psychological Assessment III (1 Unit)
Development of a) skills in diagnostic assessment of psychopathology using semi-structured interviews; b) skills in the use/interpretation of self-report measures of personality and psychological functioning; c) familiarity with other approaches to psychological assessment (i.e., performance based or projective measures); d) appreciation of the role of cultural/ diversity issues in the context of psychological assessment. Prerequisite: CLIN_PSY 403-0 or equivalent.

CLIN_PSY 407-0 Child Psychological Assessment (1 Unit)
This course aims to increase knowledge competencies in psychological and neuropsychological assessment of children and adolescents, skill competencies in test administration, scoring, and interpretation, and skill competencies in report writing.

CLIN_PSY 408-0 Psychopathology Laboratory (0.5 Unit)
This course supplements the science-focused Psychopathology course by further developing practical knowledge in DSM5 diagnostic criteria, diagnostic interviewing, and differential diagnoses. The class is meant to increase practical knowledge and skills needed to perform intake assessments at clinical placements.

CLIN_PSY 410-0 Psychodynamic Traditions (1 Unit)
Psychoanalytic theories and concepts; their impact upon contemporary thought, theory, and clinical practice. Recent developments and applications reviewed in the light of current evidence and criticism.

CLIN_PSY 411-0 History and Systems of Psychology (1 Unit)
The primary goal of this self-directed course is to develop knowledge in the origins and development of major ideas in the discipline of psychology. This course supplements the historical and systems content.
already provided in other courses, and is intended for students that have not already completed a documented evaluative educational experience in the history and systems of psychology prior to matriculating to Northwestern.

CLIN_PSY 412-1 Cognitive Psychology (0 Unit)
Classical and contemporary research and theory in cognitive psychology, cognitive neuropsychology, and cognitive neuroscience.

CLIN_PSY 412-2 Cognitive Psychology (0 Unit)
Classical and contemporary research and theory in cognitive psychology, cognitive neuropsychology, and cognitive neuroscience. Prerequisite: CLIN_PSY 412-1.

CLIN_PSY 412-3 Cognitive Psychology (1 Unit)
Classical and contemporary research and theory in cognitive psychology, cognitive neuropsychology, and cognitive neuroscience. Prerequisite: CLIN_PSY 412-2.

CLIN_PSY 413-0 Advanced Social Psychology (1 Unit)
Development of advanced, graduate-level knowledge of the social basis of behavior through social psychological principles underpinning human behavior; specifically, understanding a) major theories related to the social basis of behavior; b) seminal and recent empirical evidence for the social basis of behavior; c) application of the major theories and evidence of the social basis of behavior to clinical psychology.

CLIN_PSY 414-0 Diversity in Psychological Science and Practice (1 Unit)
Knowledge of theory and research related to human diversity, b) basic skills in approaching diversity in clinical practice and research, c) related ethical issues, d) self-awareness, e) developing a sense of cultural humility, f) sensitivity to the centrality of diversity on the lives of patients, research participants, and colleagues, g) knowledge of general domains of diversity.

CLIN_PSY 415-1 Scientific and Professional Ethics in Psychology (1 Unit)
Understanding of ethical and professional concerns in the field of clinical psychology. Using readings on ethics, responsible conduct of research, and case examples, the course addresses professional issues associated with the clinical practice of psychology, research, teaching, supervision, forensic activities, administration, and other professional activities. This course fully satisfies NIH’s "Instruction in the Responsible Conduct of Research" requirement (NOT-OD-10-019).

CLIN_PSY 416-0 Psychopathology (1 Unit)
The overall goal of this course is to develop foundational knowledge in theory, etiology, and presentation of psychological and psychiatric disorders and to develop skills in conducting diagnostic assessments and treatment interventions of psychological and psychiatric disorders.

CLIN_PSY 417-0 Behavioral Neuroscience (1 Unit)
Development of advanced knowledge in the multiple biological underpinnings of behavior and mental processes, including a) architecture of the CNS and functions of neurons; b) role of neurotransmitters and receptors in the CNS; c) brain development/plasticity; and d) CNS and sensory processes, motor control, regulatory systems, cognition, behavior, emotion, and consciousness.

CLIN_PSY 426-0 Research Methods I (1 Unit)
This course provides statistical foundations of applied psychological research, including an introduction to elementary statistical principles and techniques (e.g., basic parametric and nonparametric statistics, analysis of variance, simple factorial designs, correlation, and regression).

CLIN_PSY 427-0 Research Methods II (1 Unit)
This course continues to develop skills in advanced statistical topics and the ability to conduct statistical analysis independently. Topics covered include parametric and nonparametric statistics, advanced analysis of variance models, and advanced regression models. Prerequisite: CLIN_PSY 426-0.

CLIN_PSY 428-0 Research Methods III (1 Unit)
This course continues to develop skills in advanced statistical topics and the ability to conduct statistical analysis independently. Topics covered include mixed designs, multivariate analysis of variance, survival analysis, exploratory factor analysis, loglinear models, and hierarchical linear models. Prerequisite: CLIN_PSY 427-0.

CLIN_PSY 429-0 Advanced Research Methodology (1 Unit)
An examination of validity, measurement, experimental design, sampling, data management and meta-analysis. Students design their own research proposals.

CLIN_PSY 432-0 Family Therapy (1 Unit)
Understanding of the historical roots of family therapy and its evolution toward evidence-based practice. Through live supervision, this course is designed to not only increase knowledge of family therapy, but also develop skills in understanding family-based transactional processes, family-based mechanisms of change, and comfort with Integrative Module-based Family Therapy.

CLIN_PSY 441-0 Introduction to Psychotherapy (1 Unit)
Introduction to the major theories of psychotherapeutic action and change, including basic psychotherapy skills common across approaches as well as those specific to each theoretical perspective, as well as development of awareness of cultural diversity, contextual factors, and individual differences in psychotherapy.

CLIN_PSY 442-0 Sexual Disorders and Couple Therapy (1 Unit)
This course develops knowledge and skills in the assessment and treatment of sexual disorders and in the treatment of relationship dysfunction through couple therapy. Sexual disorders to be covered will include gender disorders, problematic sexual behavior, sexual dysfunctions and professional sexual misconduct. The predominant approaches to couple therapy will be examined.

CLIN_PSY 443-0 Advanced Psychotherapy (1 Unit)
This course further develops knowledge and skill competencies in various psychotherapy models, providing a theoretical background for the model, model-specific case formulation, common interventions used within the model, and presentation of case studies illustrating each model. Prerequisite: CLIN_PSY 441-0.

CLIN_PSY 444-0 Cognitive-Behavior Therapies (1 Unit)
This course develops an understanding of the theoretical underpinnings of cognitive-behavior therapy, cognitive-behavioral case formulation, practical aspects of key cognitive-behavioral techniques across disorders, flexible application of cognitive behavioral therapy to complex and/or unique problems in various contexts and settings.

CLIN_PSY 445-0 Cognitive and Behavioral Treatments for Depression (0.5 Unit)
The goal of this seminar is to synthesize theory, skills, and experience in Behavioral Activation and Cognitive Therapy for depression to strengthen your adherence and competency. Weekly lectures include didactics, rehearsal, demonstrations, and experiential exercises.

CLIN_PSY 446-0 Acceptance and Commitment Therapy (1 Unit)
This course develops foundational knowledge in the research, theory, and practice of Acceptance and Commitment Therapy. Prerequisite: CLIN_PSY 441-0.
This course is designed to develop foundational knowledge in the
research, theory, and practice of Dialectical Behavior Therapy (DBT).

This course is designed to develop foundational knowledge in the
research, theory, and practice of Positive Psychology.

This course develops knowledge of and familiarity with the latest
research in the field of Cognitive Psychology through readings,
presentations, and discussion. The secondary purpose of this course is
to develop skills in oral presentation and applying recent research in the
field of Cognitive Psychology to future research, grant development, and
clinical assessment and treatment.

This course develops knowledge of and familiarity with the latest
research related to Diversity in Psychological Science and Practice
through readings, presentations, and discussion. The secondary purpose of this course is
to develop skills in oral presentation and applying recent research in the
field of Diversity to future research, grant development, and
clinical assessment and treatment.

This course develops knowledge of and familiarity with the latest
research in the field of Social Psychology through readings,
presentations, and discussion. The secondary purpose of this course is
to develop skills in oral presentation and applying recent research in the
field of Social Psychology to future research, grant development, and
clinical assessment and treatment.

This course examines how cognitive and behavioral models can be
used in conceptualizing and treating behavioral and emotional disorders
among youth. Evidence for the efficacy and effectiveness of alternative
interventions, as well as clinical issues related to the practice of CBT with
children, adolescents, and families are reviewed.

Psychopathologies of childhood, emphasizing behavior and emotional
disorders, conduct disorders, the psychoses of childhood, children’s
physical handicaps, chronic health disorders, mental retardation, learning
disabilities and hyperactivity, transient situational disorders, and special
symptom disorders.

This course provides graduate-level exposure to: the physical, biological,
and neuroscience basis of neuroimaging, the technologies of in vivo
neuroimaging, the application of these technologies to understanding
questions in neuroscience, and an introduction to the design and analysis
of neuroimaging experiments.

This course introduces students to the field of clinical neuropsychology,
reviewing its history and examining the classical clinical conditions that
laid the foundations for modern day neuropsychology and cognitive
neuroscience. Key clinical syndromes (e.g., aphasia, apraxia, agnosia,
amnesia, frontal/executive disorders) and mechanisms of disease
(stroke, trauma, neurodegenerative disease) are reviewed with emphasis
on clinically relevant features.

This course familiarizes students with the structure and function of the
human central nervous system in an effort to establish clinical relevance.
The course aims to develop knowledge of the location and function of key
human brain regions known to support cognition and behavior, as well
as understanding of how lesions or disruption to these regions produce
certain neurobehavioral syndromes.

Overview of the characteristic signs, symptoms, and presentation of
various neurologic and neuropsychiatric syndromes evaluated in a
behavioral neurology setting and their underlying neuroanatomical and
functional mechanisms.

Overview of the characteristic signs, symptoms, and presentation of
various neurologic and neuropsychiatric syndromes evaluated in a
behavioral neurology setting and their underlying neuroanatomical and
functional mechanisms. Prerequisite: CLIN_PSY 474-1.

Overview of the characteristic signs, symptoms, and presentation of
various neurologic and neuropsychiatric syndromes evaluated in a
behavioral neurology setting and their underlying neuroanatomical and
functional mechanisms. Prerequisite: CLIN_PSY 474-2.

This course provides a hands-on introduction to the practice of
neuropsychological assessment. The course aims to provide a theoretical
understanding of neuropsychological assessment theory, and for
students to achieve basic competence in the administration, scoring, and
interpretation of common neuropsychological assessment instruments.
Prerequisites: CLIN_PSY 402-0; CLIN_PSY 403-0; CLIN_PSY 404-0.

This course provides an understanding of the application of
psychological practices to common medical conditions, including
knowledge of theory and research related to behavioral medicine,
awareness of the training, professional and ethical issues related to
behavioral medicine, the scientific, theoretical, empirical, and contextual
bases of behavioral medicine interventions, and the role of evidence-
based practice in behavioral medicine.

This course examines the role of clinical health psychology in primary
care medicine, including understanding of primary care as the “front
line” for the mental and physical health needs of patients, the scientific,
theoretical, empirical, and contextual bases of primary care psychology,
the training, professional, and ethical issues related to primary care
psychology, and techniques often used in primary care.

Development of knowledge and familiarity with psychopharmacology
and common psychopharmacological agents used in the treatment of
psychiatric disorders.

This course provides an overview of mental health policy in the United
States, covering the history of mental health policymaking, recent policy
changes, and implications for the mental health research, service, and
the US population. Principles of mental health recovery, financing and
management of healthcare systems, and implications for future system reform will also be addressed.

CLIN_PSY 483-0 Forensic Neuropsychology and Psychology (1 Unit)
This course provides a foundation of knowledge in the interaction of the legal system with neuropsychology and psychology. Student will develop knowledge and skill competencies in the legal system, case law, admissibility of evidence, mental health law, neuropsychology of violence and aggression, neurocriminology, malingering, antisocial behavior and psychopathy, competency assessment, capital sentencing, juvenile justice system, juvenile evaluations, forensic assessment of sex offenders and dangerousness.

CLIN_PSY 487-0 Life-Span Developmental Psychology (1 Unit)
This course examines psychological development across the lifespan, including biological, cognitive, social, and emotional development, with particular attention to environmental and cultural influences. Specific aims include an overview of major theories of development, and synthesizing of development research across multiple domains.

CLIN_PSY 490-1 Professional Development in Clinical Psychology (0 Unit)
This course orients students to the MA program, matches students with available mentors/labs, and introduces students to career options in academic clinical psychology. It refines MA students' interests in academic clinical psychology and helps them prepare for the next steps in their careers.

CLIN_PSY 490-2 Professional Development in Clinical Psychology (0 Unit)
This course orients students to the MA program, matches students with available mentors/labs, and introduces students to career options in academic clinical psychology. It refines MA students' interests in academic clinical psychology and helps them prepare for the next steps in their careers.
Prerequisite: CLIN_PSY 490-1.

CLIN_PSY 490-3 Professional Development in Clinical Psychology (0 Unit)
This course orients students to the MA program, matches students with available mentors/labs, and introduces students to career options in academic clinical psychology. It refines MA students' interests in academic clinical psychology and helps them prepare for the next steps in their careers.
Prerequisite: CLIN_PSY 490-2.

CLIN_PSY 490-4 Professional Development in Clinical Psychology (1 Unit)
This course orients students to the MA program, matches students with available mentors/labs, and introduces students to career options in academic clinical psychology. It refines MA students' interests in academic clinical psychology and helps them prepare for the next steps in their careers.
Prerequisites: CLIN_PSY 490-3.

CLIN_PSY 498-0 Special Topics in Clinical Psychology (1 Unit)
New course possibilities not yet offered regularly and seminar offerings by visiting faculty in their areas of special interest and expertise.

CLIN_PSY 498-1 Special Topics in Clinical Psychology (1 Unit)

CLIN_PSY 498-2 Special Topics in Clinical Psychology (1 Unit)

CLIN_PSY 498-3 Special Topics in Clinical Psychology (1 Unit)

CLIN_PSY 498-4 Special Topics in Clinical Psychology (1 Unit)

CLIN_PSY 499-0 Independent Study (1 Unit)
Permission of instructor and department required. May be repeated for credit.

CLIN_PSY 523-0 Practicum (1 Unit)
Diagnostic evaluation, clinical assessment, and psychotherapy experiences with hospitalized and clinic populations of various ages and problems. May be repeated for credit.

CLIN_PSY 526-0 Interprofessional Education Seminar (1 Unit)
This course is designed to introduce supervision, consultation, and interprofessional/interdisciplinary skills in a seminar format.

CLIN_PSY 550-0 APA-Accredited Internship (Full-Time, 1-year) (0 Unit)
Clinical Internship requirement completed at an APA-accredited internship site, full-time for 1 year.

CLIN_PSY 590-0 Research (1-3 Units)
Individual research under faculty supervision in appropriate laboratories, hospitals, and clinics. May be repeated for credit.
