CIVIL AND ENVIRONMENTAL ENGINEERING (CIV_ENV)

CIV_ENV 302-0 Engineering Law (1 Unit)
Prerequisite: junior engineering standing.

CIV_ENV 303-0 Environmental Law and Policy (1 Unit)
An introduction to important aspects of environmental law and policy. Covers a wide range of environmental topics, with a focus on major federal environmental statutes.
Prerequisite: junior or senior standing.

CIV_ENV 304-0 Civil and Environmental Engineering Systems Analysis (1 Unit)
Quantitative techniques to develop descriptive and prescriptive models that support efficient planning and management of civil and environmental engineering systems.
Prerequisite: MATH 220-2 or equivalent.

CIV_ENV 306-0 Uncertainty Analysis (1 Unit)
Probability, statistics, and decision theory. Discrete and continuous random variables, marginal and conditional distributions, moments, statistical model selection and significance tests, hypothesis testing, and elementary Bayesian decision theory. Application to problems in soil mechanics, water resources, transportation, and structures.

CIV_ENV 308-0 Environmental Justice (1 Unit)
This course will examine evidence that there is not equal environmental protection in this country and analyze why this inequality exists. Course participants will review evidence of environmental injustice, with attention to perspectives of grassroots organizations, the U.S. EPA, and businesses. The course will explore why civil and human rights have become important aspects of environmental protection activities worldwide.

CIV_ENV 309-0 Climate and Energy - Law and Policy (1 Unit)
This course is a survey of the major laws that regulate the acquisition of energy resources, the conversion of energy resources into usable energy, the energy transmission and transportation infrastructure and the climate change implications of these activities.

CIV_ENV 314-0 Organic Geochemistry (1 Unit)
The sources and fates of organic matter in the natural environment; global cycling of organic carbon; applications to the study of modern and ancient environments. Taught with EARTH 314-0; may not receive credit for both courses.
Prerequisites: 1 course in earth and planetary sciences or environmental sciences; 1 course in chemistry.

CIV_ENV 317-0 Biogeochemistry (1 Unit)
Cycling of biogenic elements (C, N, S, Fe, Mn) in surficial environments. Emphasis on microbial processes and isotopic signatures.
Prerequisites: 1 quarter of chemistry; 1 quarter of geoscience, environmental sciences, or biological sciences.

CIV_ENV 318-0 Mechanics of Fracture (1 Unit)
Stress concentration, analysis of the stress field near a crack tip, fracture modes, brittle and ductile fracture, fracture toughness, fracture criteria, fracture mechanics design, fatigue, and dynamic effects.

CIV_ENV 319-0 Theory of Structures 2 (1 Unit)
Shear center, non-prismatic members, nonlinear materials, influence lines, Mueller-Breslau principle, approximate methods of analysis, energy methods, stiffness matrix, and computer methods of analysis.
Prerequisite: CIV_ENV 221-0.

CIV_ENV 320-0 Structural Analysis--Dynamics (1 Unit)
Prerequisite: CIV_ENV 221-0.

CIV_ENV 321-0 Concrete Properties (1 Unit)
Concrete as a composite material; relationship between constitutive laws and microstructure; failure theories; fracture; fatigue; strain rate effects; destructive and nondestructive testing; creep and shrinkage; chemistry of cement hydration; admixtures; aggregates; proportioning; new materials.

CIV_ENV 322-0 Structural Design (1 Unit)
Design criteria; planning and design aspects of structural systems for gravity and lateral loads. A total design project involving the analysis and design of a structure.
Prerequisite: CIV_ENV 325-0 or equivalent.

CIV_ENV 323-0 Structural Steel Design (1 Unit)
Rational basis of structural design. Design approach for structural-steel components of a building system.
Prerequisites: CIV_ENV 216-0; CIV_ENV 221-0 or equivalent.

CIV_ENV 325-0 Reinforced Concrete (1 Unit)
Prerequisite: CIV_ENV 221-0.

CIV_ENV 327-0 Finite Element Methods in Mechanics (1 Unit)
Development of finite elements from variational principles and application to static stress analysis. Introduction to techniques for transient and generalized field problems. Computer implementation of finite element techniques. Taught with MECH_ENG 327-0; may not receive credit for both courses.

CIV_ENV 328-0 Computational Forensics and Failure Analysis (1 Unit)
The course will cover the use of the scientific method for accident investigation, hypothesis development, and the use of the finite element method to analyze the root cause of a failure. Practical application problems for both civil and mechanical structures will be analyzed using commercial finite element codes (Abaqus, Hypermesb, LS-Dyna). Prerequisite: CIV_ENV 327-0 or MECH_ENG 327-0.

CIV_ENV 330-0 Engineering Project Management (1 Unit)
Techniques for coordinating decisions and actions of various parties in the design and construction of civil and environmental engineering projects. Delivery systems; preconstruction services; project planning; cost control and value engineering; bidding.
Prerequisite: instructor consent.

CIV_ENV 332-0 Building Construction Estimating (1 Unit)
Estimation of cost at different stages of design; conceptual estimating and quantity takeoff of various elements, such as materials, labor, and equipment.
Prerequisites: CIV_ENV 330-0; consent of instructor.

CIV_ENV 336-0 Project Scheduling (1 Unit)
Project planning, scheduling, and control using CPM arrow and precedence networks; resource allocation and resource leveling; earned value analysis; linear scheduling; PERT, CPM in dispute resolution and litigation, computer scheduling.
Prerequisite: CIV_ENV 330-0.
CIV_ENV 340-0 Hydraulics and Hydrology (1 Unit)
Civil and environmental engineering applications of fluid mechanics. Turbulent flow in pipes and rivers, pipe and river networks, and open channels. Prerequisite: MECH_ENG 241-0.

CIV_ENV 346-0 Ecosystems and Ecological Engineering (1 Unit)
Interactions between water and ecosystems in freshwater, terrestrial, and urban environments. Feedbacks between ecological and hydrological processes. Engineering of ecosystems such as constructed wetlands, green roofs, and other green infrastructure for resilient and sustainable water management. Prerequisites: Students must have taken MECH_ENG 241, CIV_ENV 260, and CIV_ENV 361-1 or graduate standing.

CIV_ENV 352-0 Foundation Engineering (1 Unit)
Application of soil mechanics to analysis and design of foundations and embankments. Settlement of structures, bearing capacities of shallow and deep foundations, earth pressures on retaining structures, and slope stability. Prerequisite: CIV_ENV 250-0.

CIV_ENV 353-0 Energy Geotechnics & Geosystems (1 Unit)
This course focuses on energy geotechnics and geosystems: novel earth-contact technologies that provide renewable energy supply and structural support to any built environment. The course comprises theoretical and practical sessions. The theoretical sessions expand on the analysis and design of such technologies from energy, geotechnical and structural perspectives. The practical sessions simulate an actual design project of energy geosystems.

CIV_ENV 356-0 Transport Processes in Porous Media (1 Unit)
Transport processes in porous media including unsaturated flow, flow in deformable porous media, convective transport of solutes with hydrodynamic dispersion effects, and coupled flow phenomena with particular emphasis on electrokinetics.

CIV_ENV 357-0 Terramechanics (1 Unit)
Problems defined by the interaction between machines and terrain—or by organisms and terrain—are ubiquitous on Earth, and they are beginning to play important roles elsewhere as we explore, exploit, and perhaps eventually occupy the moon and other planets. While aspects of these problems are understood, much remains to be learned in the field of terramechanics.

CIV_ENV 361-1 Environmental Micropollution (1 Unit)
Basic principles and practical applications of microbiology to environmental issues, such as microbial contamination, degradation of organic contaminants, production of alternative fuels, and global climate change.

CIV_ENV 361-2 Public & Environmental Health (1 Unit)
Current problems in public and environmental health, such as the worldwide burden of major infectious diseases, emergence of new pathogens, and environmental reservoirs of infectious organisms. Prerequisite: CIV_ENV 361-1 or consent of instructor.

CIV_ENV 364-0 Sustainable Water Systems (1 Unit)
An overview of the engineered water cycle focusing the fundamental principles as well as the design and assessment methods for physical, chemical and biological treatment unit processes for drinking water treatment, used water treatment and reuse, and emerging issues such as the energy-food-water nexus. Prerequisites: CIV_ENV 260-0, MECH_ENG 241-0.

CIV_ENV 365-0 Environmental Laboratory (1 Unit)
Chemical and microbiological aspects of environmental engineering and science are explored through an integrated laboratory course. Prerequisite: CIV_ENV 367-0.

CIV_ENV 367-0 Chemical Processes in Aquatic Systems (1 Unit)
Chemical principles for understanding and predicting the chemical composition and evolution of natural waters using an equilibrium approach. Applications to environmental issues such as metal speciation and toxicity, ocean acidification, carbon storage. Prerequisite: BMD_ENG 250-0 or CHEM_ENG 211-0.

CIV_ENV 368-0 Sustainability: The City (1 Unit)
Exploration of the issues that motivate the design and engineering of sustainable resource use and development.

CIV_ENV 370-0 Emerging Organic Contaminants (1 Unit)
Fundamental molecular processes that govern the fate and transformation of emerging organic contaminants in natural and engineered environmental systems. Prerequisite: CHEM 210-1 or consent of instructor.

CIV_ENV 371-0 Introduction to Transportation Planning and Analysis (1 Unit)
Analysis and design of solutions to transportation problems; introduction to selected operations research and statistical analysis techniques; use of case studies in urban transportation, intercity passenger transport, and freight movements. Prerequisite: junior standing or consent of instructor.

CIV_ENV 376-0 Transportation System Operations (1 Unit)
Traffic-flow theory; vehicle and human factors, capacity analysis, intersection performance and control; management and control of arterial streets and networks; neighborhood traffic restraint, urban transit operations. Operations concepts and theories applied to actual problems through laboratory practice. Prerequisite: basic understanding of calculus and statistics; knowledge of MATLAB desirable but not required.

CIV_ENV 377-0 Choice Modelling in Engineering (1 Unit)
"This course focuses on the theory and practice of survey design, data collection and analysis. In this course students will learn the theories and scientific debates around the design, administration and analysis of various types of behavioral data-collection methods."

CIV_ENV 385-1 Architectural Engineering and Design 1: Fundamentals (1 Unit)
Architectural engineering and design studios: architectural history, case studies in design, construction and management of buildings, and drawing and model building. Fundamental studio: basic architectural and structural design of a simple building project. Prerequisite: junior standing in engineering or consent of instructor.

CIV_ENV 385-2 Architectural Engineering & Design 2: Intermediate (1 Unit)
Architectural engineering and design studios: architectural history, case studies in design, construction and management of buildings, and drawing and model building. Intermediate studio: architectural and structural design of a building project with multiple requirements. Prerequisites: CIV_ENV 385-1 and junior standing in engineering, or consent of instructor.

CIV_ENV 385-3 Architectural Engineering & Design 3: Advanced Studio (1 Unit)
Architectural engineering and design studios: architectural history, case studies in design, construction and management of buildings, and drawing and model building. Advanced studio: architectural and structural design of a large, complex building project.
Prerequisites: CIV_ENV 385-2 and junior standing in engineering; or consent of instructor.

CIV_ENV 388-2 Building Science II: Application for Sustainable Buildings (1 Unit)
This course enriches and applies the concepts learned in CIV_ENV 388-1. The course comprises both theoretical and practical sessions. Theoretical sessions introduce the environmental factors affecting occupants' comfort inside buildings. Practical sessions focus on the design of a virtual project, with calculations related to energy consumption and visual and thermal parameters with the help of computer software.

CIV_ENV 395-0 Special Topics in Civil and Environmental Engineering (1 Unit)
Topics suggested by students or faculty and approved by the department.

CIV_ENV 398-1 Community-based Design 1 (1 Unit)
Yearlong participation in two or three-person teams projects involving research, analysis, and/or design in the solution of environmental problems affecting primarily lower-income communities. Grade assigned only on completion of both units. Prerequisite: consent of instructor.

CIV_ENV 398-2 Community-based Design 2 (1 Unit)
Yearlong participation in two or three-person teams projects involving research, analysis, and/or design in the solution of environmental problems affecting primarily lower-income communities. Grade assigned only on completion of both units. Prerequisite: consent of instructor.

CIV_ENV 410-0 Theory of Plates and Shells (1 Unit)
Derivation of governing equations for plates, cylindrical shells and spherical shells, analytical and numerical methods for the solutions of elastic and inelastic problems, and civil engineering applications.

CIV_ENV 411-0 Micromechanics 1 (1 Unit)
Mechanics of microstructures of materials, such as continuum theory of dislocations, inclusions, inhomogeneities, cracks, and composite materials. Unified eigenstrain method employed.

CIV_ENV 414-1 Mechanics of Composite Materials 1 (1 Unit)
Introduction to basic concepts: fabrication of composite materials, micromechanics, macro-mechanics of unidirectional lamina, failure theories, mechanics of multidirectional laminate, laminate theory, hydrothermal effects, inter-laminar stresses, stress concentrations, structural design and optimization, and nondestructive evaluation. CIV_ENV 414-1 and MECH_ENG 414-1 are co-listed.

CIV_ENV 414-2 Mechanics of Composite Materials II (1 Unit)
Introduction to basic concepts: fabrication of composite materials, micromechanics, macro-mechanics of unidirectional lamina, failure theories, mechanics of multidirectional laminate, laminate theory, hydrothermal effects, inter-laminar stresses, stress concentrations, structural design and optimization, and nondestructive evaluation. CIV_ENV 414-2 and MECH_ENG 414-2 are co-listed.

CIV_ENV 415-0 Theory of Elasticity (1 Unit)

CIV_ENV 416-0 Computational Nanodynamics (1 Unit)
The objective of this course is to learn how to use theoretical and computational modeling tools to simulate dynamic solid mechanics phenomena at small scales. Topics covered include elementary concepts in dynamics, statistical mechanics, molecular interactions, coarse-graining strategies, and application of the molecular dynamics methodology to elasticity, diffusion, self-assembly, vibrations, fragmentation and fracture problems of relevance to nanoscale, biological and biomolecular systems.

CIV_ENV 417-1 Mechanics of Continua 1 (1 Unit)
Introduction to mechanics of continuous media. Cartesian tensors; kinematics of deformable media; stress; balance laws; constitutive relations for selected solids and fluids.

CIV_ENV 419-0 Elastic Wave Propagation in Periodic Solids (1 Unit)
Introduction of elastodynamic wave equations in anisotropic solids, plane longitudinal, transverse, and surface waves, harmonic waves and pulses, energy considerations, reflection, transmission, and mode conversion, scattering and diffraction problems, reciprocity relations, piezoelectric materials, and band engineering using periodic solids and metamaterials. Prerequisites: CIV_ENV 415-0, MECH_ENG 363-0 or MECH_ENG 390-0, or equivalent.

CIV_ENV 420-0 Advanced Structural Analysis (1 Unit)
Solution of nonlinear equations for structures, shear center and center of twist of open and multicell cross sections, shear stresses in multicell closed cross sections, restrained warping torsion stresses.

CIV_ENV 421-0 Prestressed Concrete Design (1 Unit)

CIV_ENV 422-0 Inelastic Analysis of Structures (1 Unit)

CIV_ENV 423-0 Matrix Analysis of Structures (1 Unit)
Use of matrix methods for analysis of articulated structural systems, geometric matrices, stability, analysis of geometrically nonlinear systems, introduction to the finite element method.

CIV_ENV 424-0 Stability of Structures (1 Unit)
Buckling of perfect and imperfect columns, mathematical treatment of various types of stability problems and stability criteria, dynamic and static instability, and energy methods. Buckling of frames, trusses, and beams. Snap-through, elastic-plastic columns, creep buckling, and basic approach to buckling of two- and three-dimensional bodies.

CIV_ENV 425-0 Behavior of Reinforced Concrete (1 Unit)
Nonlinear behavior of reinforced concrete structural members. Assumptions underlying serviceability criteria, ductility for earthquake design, etc.

CIV_ENV 426-1 Advanced Finite Element Methods 1 (1 Unit)
Methods for treating material and geometric nonlinearities by finite elements; transient analysis: explicit and implicit time integration, partitioned methods, and stability; hybrid and mixed elements; finite elements for plates and shells; convergence, efficiency, and computer implementation. Co-listed with MECH_ENG 426-1.

CIV_ENV 426-2 Advanced Finite Element Methods 2 (1 Unit)
This course will cover the fundamentals of non-standard finite element formulations such as Moving Least Squares (MLS), Element Free Galerkin (EFG), Reproducing Kernel Particle Method (RKPM), Material Point Method (MPM), Arbitrary Lagrangian Eulerian (ALE) Formulations, and the eXtendended Finite Element Method (XFEM). The course will also provide an in-depth investigation of advanced application of finite
element analysis and interfacing user-developed material models with commercial finite element codes (Abaqus/LS-DYNA). Theory and implementation of computational plasticity, nonlinear elasticity, pressure-sensitive plasticity, and damage-based plasticity will be discussed. Material classes to be discussed are those commonly found in manufacturing, geomechanical, and biological applications such as ductile metals, soil, and tissue. Co-listed with MECH_ENG 426-2.

**CIV_ENV 428-1 Structural Design I (1 Unit)**

First course in the structural design studio. Students will learn fundamental topics of structural mechanics, materials, and engineering, and then apply them to a realistic design project, coordinated by practicing structural engineers.

**CIV_ENV 428-2 Structural Design II (1 Unit)**

Second course in the structural design studio. Students will learn fundamental topics of structural mechanics, materials, and engineering, and then apply them to a realistic design project, coordinated by practicing structural engineers.

**CIV_ENV 428-3 Structural Design III (1 Unit)**

Third course in the structural design studio. Students will learn fundamental topics of structural mechanics, materials, and engineering, and then apply them to a realistic design project, coordinated by practicing structural engineers.

**CIV_ENV 430-0 Quasibrittle Fracture and Scaling (1 Unit)**

**CIV_ENV 434-0 Total Quality Management (1 Unit)**

How to achieve quality through continuous improvement of processes, customer satisfaction, and creating a team environment; includes data collection and analysis for process improvement.

**CIV_ENV 435-0 Cost Engineering and Control (1 Unit)**

Application of cost engineering for construction companies and projects; accounting methods; estimating process and bid preparation; labor cost; earned value analysis; accounting for equipment; cost-control concepts; cash flow management, changes and extras; claims. Prerequisites: PROJ_MGT 403-0 and PROJ_MGT 405-0.

**CIV_ENV 440-0 Environmental Transport Processes (1 Unit)**

Processes controlling transport and fate of dissolved and suspended substances in natural and engineered environmental systems. Mass balances, hydrodynamic transport, phase and mass transfers; the fate of reactive species in complex environmental systems.

**CIV_ENV 442-0 Environmental Biotechnology for Resource Recovery (1 Unit)**

Theory and practice of microbiological processes used for pollution control and resource recovery; kinetics of suspended-growth and fixed-film processes, activated sludge, biofilm processes, nitrogen and phosphorus removal, methanogenesis. Prerequisites: CIV_ENV 440-0, CIV_ENV 361-1.

**CIV_ENV 443-0 Microbial Ecology for Resource Recovery (1 Unit)**

This course provides students with an overview of microbial ecology— that is, the study of interactions between microorganisms and the environment—and how complex microbial communities are linked function and stability of both engineered and natural systems.

**CIV_ENV 444-0 Physical/Chemical Processes in Environmental Control (1 Unit)**

Theory and practice of separations and conversions in water quality and residuals management, coagulation, adsorption, ion exchange, oxidation, sedimentation, flocculation, filtration. Prerequisites: CIV_ENV 367-0, CIV_ENV 440-0 or equivalent.

**CIV_ENV 447-0 Molecular Microbiology (1 Unit)**

An in-depth look at current molecular methods used to study environmental microbiology. Fundamentals of molecular microbiology, creative and critical analysis of literature through proposal writing and reviewing. Topics focus on polymerase chain reaction and derivatives; DNA sequencing; proteomics & proteogenomics, and metabolomics.

**CIV_ENV 448-0 Computational Chemodynamics (1 Unit)**

An in-depth understanding of the processes that govern the fate of chemicals in the environment by developing computational tools used to quantify the concentrations of contaminants and nutrients. Numerical methods focus on solving: multiphase equilibrium problems, box models, reaction networks and kinetics, the interplay between transport and reaction, partitioning, and trophic relationships.

**CIV_ENV 450-1 Soil Mechanics 1 (1 Unit)**

**CIV_ENV 450-2 Soil Mechanics 2 (1 Unit)**

**CIV_ENV 450-3 Soil Mechanics 3 (1 Unit)**

**CIV_ENV 452-0 Unsaturated Soil Mechanics (1 Unit)**

Principles of the hydraulics and mechanics of natural and engineered soils characterized by unsaturated conditions.

**CIV_ENV 454-0 Constitutive Models for Soils (1 Unit)**

Numerical models of effective and total stress-strain response of soils; non-linear pseudo-elastic, elasto-plastic and bounding surface models; parameter identification and applications. Prerequisites: CIV_ENV 450-1 or permission of instructor.

**CIV_ENV 455-0 Plasticity and Limit Analysis (1 Unit)**

Fundamental theory of and computational tools for plasticity, including the concepts of yielding and plastic flow in materials and, by extension, the concepts of limit (collapse) loads and collapse mechanisms in boundary value problems.

**CIV_ENV 456-0 Computational Geotechnics (1 Unit)**
Introduction to theory, analysis, and model development. Second Quarter: Advanced theory, disaggregate choice models, and prediction methods.

**CIV_ENV 480-2 Advances in Travel Demand Analysis and Forecasting (1 Unit)**
This course addresses developments in the econometric and behavioral aspects of demand analysis and forecasting, supply-demand interaction in transport systems, and dynamics models.

**CIV_ENV 482-0 Evaluation and Decision Making for Infrastructure Systems (1 Unit)**
Theories and methods of evaluation and choice from alternatives for transportation and other infrastructure projects and systems. Economic, quantitative, and judgmental methods for both a priori and before-and-after evaluation. Measurement, modeling, analysis, and presentation problems.

Prerequisites: CIV_ENV 306-0.

**CIV_ENV 483-0 Infrastructure Systems Analysis (1 Unit)**
Quantitative techniques for developing prescriptive models that can be used to support efficient planning and management of civil infrastructure systems.

**CIV_ENV 484-0 Advanced Theories of Traffic Flow (1 Unit)**
This course is concerned with the behavior of vehicular and multimodal traffic as a complex system. It seeks to convey a conceptual understanding of traffic processes through the development of mathematical models of these processes.

**CIV_ENV 495-0 Selected Topics in Civil Engineering (1 Unit)**
Special topics under faculty direction.

**CIV_ENV 497-0 Special Topics in Civil Engineering (0.5 Unit)**
Topics selected from work of current interest in civil or environmental engineering.

**CIV_ENV 499-0 Projects (1-3 Units)**
Special projects under faculty direction. Permission of instructor and department required.

**CIV_ENV 504-0 Structural System Capstone Pre-design Seminar (0 Unit)**
Preliminary discussion and planning of a structural system with realistic constraints to be designed by students in the M.S. program with specialization in structural engineering and geotechnical engineering.

**CIV_ENV 508-0 M.S. Research Paper for non-thesis option (0 Unit)**
Report on topics approved by faculty for M.S. students with non-thesis option.

**CIV_ENV 512-1 Structural Engineering & Mechanics Sem (0 Unit)**
Selected topics in structural engineering and materials and mechanics of materials and solids.

**CIV_ENV 512-2 Structural Engineering & Mechanics Sem (0 Unit)**
Selected topics in structural engineering and materials and mechanics of materials and solids.

**CIV_ENV 512-3 Structural Engineering & Mechanics Sem (0 Unit)**
Selected topics in structural engineering and materials and mechanics of materials and solids.

**CIV_ENV 515-1 Geotechnics Seminar (0 Unit)**
Discussion of classical and current literature in the field.

**CIV_ENV 515-2 Geotechnics Seminar (0 Unit)**
Discussion of classical and current literature in the field.

**CIV_ENV 516-1 Seminar in Environmental Engineering & Science (0 Unit)**
Topics vary. Examples: environmental microbiology; innovation technologies for recycling, recovery, treatment of chemical residuals;
environmental policy; public health; water and waste treatment processes; contaminant fate and impact in nature.

**CIV_ENV 516-2 Seminar in Environmental Engineering and Science (0 Unit)**
Topics vary. Examples: environmental microbiology; innovation technologies for recycling, recovery, treatment of chemical residuals; environmental policy; public health; water and waste treatment processes; contaminant fate and impact in nature.

**CIV_ENV 516-3 Seminar in Environmental Engineering and Science (0 Unit)**
Topics vary. Examples: environmental microbiology; innovation technologies for recycling, recovery, treatment of chemical residuals; environmental policy; public health; water and waste treatment processes; contaminant fate and impact in nature.

**CIV_ENV 517-1 Seminar in Transportation Engineering (0 Unit)**
Selected topics in transportation engineering.

**CIV_ENV 517-2 Seminar in Transportation Engineering (0 Unit)**

**CIV_ENV 517-3 Seminar in Transportation Engineering (0 Unit)**
Selected topics in transportation engineering.

**CIV_ENV 519-0 Responsible Conduct of Research Training (0 Unit)**

**CIV_ENV 590-0 Research (1-4 Units)**
Independent investigation of selected problems pertaining to thesis or dissertation. May be repeated for credit.
