ANTHROPOLOGY

anthropology.northwestern.edu

Anthropology is the study of humankind from a broadly comparative and historical perspective. Anthropology advances understanding of human biological and cultural diversity around the world and across time. In a changing world, anthropology provides for cross-cultural comparative analysis of diversities and inequalities. Understanding cultural, biological, and linguistic differences and similarities is central to almost any career, and students gain a critical understanding of ethical issues at play in a diverse, globalized world.

Anthropology draws on the humanities, social sciences, and natural sciences to answer compelling questions about humankind, including how the species evolved, how biology, language, and culture became its defining characteristics, and how and why cultures change over time.

Anthropology’s breadth makes the major ideal for students seeking a strong liberal arts and sciences education. Students are prepared for careers not only in anthropology and archaeology but also in a variety of fields including medicine, public health, law, journalism, marketing, international development, and business.

The department’s faculty bring together the four subfields of anthropology (archaeology, cultural anthropology, biological anthropology, and linguistic anthropology) to develop a holistic understanding of human diversity.

Students are encouraged to participate in a variety of departmental field and laboratory research projects in archaeology, ethnography, and human biology that offer the opportunity to conduct original research, which can be an integral part of a senior thesis project.
