Mathematics, often celebrated as the "Queen of the Sciences," has long been an indispensable tool in the physical sciences, engineering, and commerce. Today the social sciences and humanities also use mathematics in increasingly sophisticated ways. Students majoring or minoring in mathematics have an opportunity to learn about its diverse applications, as well as to acquire an understanding of both the foundations and the frontiers of the discipline.

The department offers a major and a minor in mathematics. The mathematics major is flexible, accommodating students interested in the foundations of the modern mathematical sciences, those primarily interested in applications to the natural or social sciences, and those interested in management or engineering.

Students with sufficiently strong preparation who seek an early exposure to rigorous mathematics should consider participating in Mathematical Experience for Northwestern Undergraduates (MENU) - see "Course Recommendations" below for more information. The department also encourages appropriately prepared undergraduate students to enroll in its graduate courses.

Course Recommendations
First-Year Placement
For information regarding course placement for first-year students, see our First Year Focus (http://www.math.northwestern.edu/undergraduate/first-year-focus).

Mathematical Experience for Northwestern Undergraduates (MENU)
Mathematical Experience for Northwestern Undergraduates (MENU) (http://math.northwestern.edu/undergraduate/menu) is a flexible program of challenging courses designed to provide qualified undergraduates with a thorough foundation in mathematics suitable for advanced study in mathematics and its applications across a wide range of disciplines.

MENU offers students an opportunity to expand their mathematical knowledge while retaining flexibility about their majors. Although MENU attracts participants with a variety of interests, the program is especially well-suited for students considering a major in mathematics, the natural sciences, or economics. The director of MENU is available to advise all MENU participants regardless of major.

During the first year MENU participants typically enroll in one of two yearlong sequences:

<table>
<thead>
<tr>

<tbody>
<tr>
<td>MATH 290-1</td>

Each sequence provides a strong background in linear algebra and multivariable calculus. In contrast to our standard mathematics courses, these sequences develop linear algebra before multivariable calculus and use linear algebra as an important tool in the study of multivariable calculus. In particular, MATH 291-1 emphasizes theory and proofs and is appropriate for students who are particularly skilled in and passionate about mathematics. Students may transfer between MATH 290-1 and MATH 291-1 with permission from the director of MENU.

After the first year MENU participants may choose among four upper-level MENU sequences:

or they may enroll in other advanced mathematics courses.

Participation in MENU is by invitation only. Students who earn a score of at least 4 on the Advanced Placement Calculus BC examination should automatically receive an invitation to participate. A student who does not automatically receive an invitation can obtain one from the director of MENU if he or she is

- an international student who has completed single variable calculus, or
- has completed a college-level sequence in single variable calculus with high grades, or
- has earned a score of 7 on the International Baccalaureate Higher-Level Mathematics Examination.

Students who excel in MATH 220-0 and MATH 224-0 may consult the director of MENU about continuing their studies of mathematics in MENU. Further information is available at math.northwestern.edu/undergraduate/menu.
