

# SCIENCE IN HUMAN CULTURE

shc.northwestern.edu

The Science in Human Culture Program prepares students to confront the global impact of science, medicine, and technology on society—and on their own lives. The adjunct major and the minor welcome humanities, social science, and science majors, including premedical students, wishing to surmount modern science's compartmentalization of knowledge. Courses bridge the sciences and the humanities and seek to foster critical thinking about the limits, authority, and impact of science, a mode of understanding and intervening that is often said to be the defining feature of modern culture.

For an up-to-date listing of courses and more information about the adjunct major and minor, consult the program website. Questions may be directed to the program administrator at shc-program@northwestern.edu.

## Themes and Eligible Courses

Some of the themes adopted by students have included medicine and society; science, environment, and society; technology and social change; science and gender; religion and scientific knowledge; and philosophy of science. For example, students interested in medicine and society might explore the interaction of medical knowledge and practice, medical ethics, and the boundaries between sickness and health. Topics addressed might include the authority of the physician, the role of the hospital, the social dimensions of racial and gender differences, and the changing conception of disease and healing.

Eligible courses include (when offered) the list below. Many other eligible courses are offered periodically and appear in the online quarterly class list posted on the program website.
