HUMAN COMMUNICATION SCIENCES MINOR

The minor in human communication sciences enables students to expand their understanding of the physical and physiological principles underlying communication. The minor is suited to students who want to learn about communication-based health issues, or to apply the knowledge and skills gained from their major to health-related industries by which they can help others. It is a strong complement to studies in therapies that use art, dance, or theatre to reach children with learning disabilities or other developmental difficulties.

Minor Requirements (7 units)

All courses for SoC majors, minors, fields of concentration and distribution requirements must be completed with a grade of C- or higher and may not be taken P/N.

A maximum of the equivalent of 2 non-Northwestern academic units can count towards an SoC minor.

A minor in human communication sciences requires 7 units of credit, of which 6 units must be in the communication sciences and disorders department. A maximum of 1 unit of research credit may be counted toward the total units required.
